

12:33:41 1 Q. Let's change the scenario and assume  
12:33:45 2 that it's a new manufacturing capacitor manufacturer  
12:33:51 3 who does not have -- is a blank page, does not have a  
12:33:55 4 library, and the task is design the 5-volt rated  
12:34:03 5 capacitor.  
12:34:04 6 I cannot go -- I'm a designer there. I  
12:34:07 7 cannot go to the library.  
12:34:09 8 Where would I turn to get my design?  
12:34:16 9 How would I be able to then determine  
12:34:18 10 what the distance --  
12:34:20 11 I don't have the distance in the past.  
12:34:22 12 I don't have anything like that. I cannot emulate the  
12:34:25 13 past.  
12:34:25 14 What do I do then to determine that  
12:34:28 15 distance?  
12:34:30 16 A. Two comments:  
12:34:33 17 One is that the -- if in deed we're  
12:34:36 18 talking exclusively U.S. MLC manufacturers.  
12:34:42 19 Q. Okay.  
12:34:44 20 A. The population of experienced design  
12:34:48 21 people is small, and the same ones move back and  
12:34:54 22 forth. And they take their experience with them.  
12:34:57 23 So they might have some general  
12:34:59 24 guidelines they would carry with them.  
12:35:06 25 B, if in deed we had a brand-new clean

12:35:11 1 slate, you'd do this by trial and error. You would  
12:35:15 2 design some parts, you'd take a sample, and you'd see  
12:35:21 3 whether they worked as you had designed them to be.

12:35:26 4 If they did, great. If they didn't,  
12:35:29 5 you'd tweak something else and you'd make a few more  
12:35:33 6 designs and you'd pick the optimum one.

12:35:38 7 Q. And how would you know whether it met  
12:35:41 8 your design or didn't meet your design if you didn't  
12:35:48 9 know to begin with what design you had?

12:35:51 10 If you didn't have any design, how would  
12:35:54 11 you then compare what the sample is to that?

12:35:58 12 What's the point of reference then?

12:36:00 13 That's what I'm not clear.

12:36:00 14 A. The point of reference is the order to  
12:36:03 15 which you're manufacturing parts.

12:36:05 16 If I as a manufacturer have an order for  
12:36:09 17 20 microfarad capacitors, plus or minus three percent  
12:36:15 18 at five volts and I want them to be within some sort  
12:36:23 19 of temperature range, I would test those capacitors to  
12:36:28 20 see whether they met all of those parameters being  
12:36:33 21 specified on the incoming order.

12:36:38 22 Q. But how --

12:36:40 23 When you have a temperature rating and  
12:36:44 24 voltage rating and the microfarad rating, how would  
12:36:51 25 you construct the initial sample to meet those

12:36:53 1 requirements first?

12:36:54 2 What would you do?

12:36:55 3 How many layers, what dielectric would  
12:36:57 4 you select?

12:36:58 5 How do you do the first sample when you  
12:37:01 6 only have 10 or 15 variables or however many the  
12:37:05 7 customer says to you that they want?

12:37:08 8 How do you do the first design with  
12:37:10 9 these parameters?

12:37:14 10 A. Another level of detail: Capacitors are  
12:37:28 11 rated by the amount of variation in their electrical  
12:37:36 12 properties allowed with temperature.

12:37:39 13 Q. Okay.

12:37:43 14 A. That allows me to group capacitor types  
12:37:47 15 by that variation.

12:37:52 16 And I would have a different ceramic  
12:37:55 17 formulation or perhaps two or three for each  
12:37:59 18 temperature variation range.

12:38:01 19 Q. Okay.

12:38:03 20 A. So now I've got --

12:38:07 21 I know which ceramic formulation I want  
12:38:12 22 to use, because that's been constrained by the  
12:38:17 23 customer's allowing some variation with temperature.

12:38:23 24 When I buy that powder from a seller of  
12:38:30 25 dielectric powders, he will -- he or she -- will have

12:38:40 1 made sample product in their own development, and he  
12:38:46 2 will say for each layer, we'll say, of 1 mil thick  
12:38:55 3 unfired tape, you will add this much capacitance.

12:39:03 4 Q. I see.

12:39:04 5 A. Therefore, I will count the number of  
12:39:06 6 layers I need to get to get that much capacitance. I  
12:39:11 7 will put some blank layers for mechanical protection  
12:39:15 8 on the top or bottom. And that will give me my count  
12:39:24 9 and initial target thickness of the layers.

12:39:30 10 He will have -- he or she -- will have  
12:39:32 11 also in their building of experimental capacitors that  
12:39:38 12 they use to sell a dielectric powder, will have also  
12:39:43 13 done this with a range of typical electroinks, inks  
12:39:50 14 used to produce the internal conductive.

12:39:54 15 So he will say, if you use a  
12:39:58 16 70 silver/40 palladium ink of this particular type,  
12:40:02 17 you lay it down to this thickness, then you will -- we  
12:40:09 18 know you produce a reliable usable part.

12:40:13 19 So now from that experience, assuming  
12:40:16 20 I'm coming in green, I will know the electrode  
12:40:20 21 material to use and how thick to screen it on.

12:40:26 22 I will use the voltage rating, 5-volt,  
12:40:30 23 10 volts, 100 volts, 1,000 volts. That will allow me  
12:40:34 24 to determine the thickness of the margin layer  
12:40:39 25 identified here as 1 in Exhibit 4, the width of that

12:40:45 1 margin layer from external surfaces, to --

12:40:50 2 You will design that such that you won't

12:40:53 3 get what's called voltage breakdown under a particular

12:40:58 4 applied voltage. And you will have a factor of 2 or

12:41:02 5 5X margin.

12:41:04 6 So if I have a 20-volt application, I'll

12:41:07 7 have a thick margin. If I have a 5-volt application,

12:41:12 8 I'll have a thinner minimum margin required.

12:41:15 9 And I use that same logic and knowledge

12:41:18 10 to build up the design.

12:41:24 11 Q. And then you sinter that initial sample

12:41:34 12 design, and then you do electrical testing of it, and

12:41:37 13 then you adjust the design --

12:41:40 14 A. Yes.

12:41:40 15 Q. -- depending on whether you've achieved

12:41:42 16 your 20 microfarads in capacitance?

12:41:50 17 A. Yes.

12:41:51 18 Q. What if I did not have a customer?

12:41:53 19 I'm a new manufacturing company. I'm

12:41:56 20 green in terms of designing capacitors. And I don't

12:42:02 21 have a customer. And I want to design something new,

12:42:06 22 maybe to offer customers and say: "Here's a new great

12:42:12 23 capacitor. Develop your applications for it. This

12:42:14 24 would be the next break through."

12:42:16 25 How do I do it then?

12:42:17 1 How would I then design and calculate

12:42:20 2 things and --

12:42:20 3 What do I do then?

12:42:24 4 A. What's typically done in my experience  
12:42:29 5 is that somebody will see a niche in the marketplace

12:42:35 6 where people who are not happy with the product

12:42:41 7 they're currently getting. And they will believe they

12:42:49 8 have a design which meets the requirements of that

12:42:54 9 niche better than anyone else.

12:43:02 10 Before such people form a capacitor

12:43:05 11 company, they will have an idea of who the customers

12:43:12 12 in -- who would buy product in that niche are.

12:43:16 13 They would usually go out and talk to

12:43:19 14 those customers, get a sense of what they'd be

12:43:26 15 interested in.

12:43:28 16 They would billed sample product,

12:43:31 17 deliver it to that potential customer, in order to try

12:43:36 18 to woo them away from their current customers.

12:43:40 19 Q. Current suppliers?

12:43:43 20 A. Current capacitor suppliers, yes.

12:43:46 21 Thank you.

12:43:47 22 Q. I see. I see.

12:43:50 23 So basically, they would talk to the --

12:43:54 24 If I --

12:43:55 25 Would it be correct to say they would

12:43:57 1 talk to the potential customer, get that customer's  
12:44:04 2 desired specifications and all the particulars of that  
12:44:09 3 particular capacitor that the customer may be looking  
12:44:13 4 for, and then go and implement those specifications,  
12:44:17 5 themselves, and if they are -- and if they did that,  
12:44:22 6 then they would deliver product and the customer would  
12:44:26 7 like and accept and --

12:44:27 8 A. Start to place orders.

12:44:28 9 Q. Place orders.

12:44:29 10 And replace the old products that it was  
12:44:32 11 using potentially in the new stream of its own  
12:44:35 12 products.

12:44:35 13 Is that --

12:44:36 14 A. In a simplified flow, yes.

12:44:38 15 Q. Okay. Okay. I see.

12:44:41 16 And when you said there are only a few  
12:44:43 17 U.S. manufacturers of multi-layer capacitors, what are  
12:44:47 18 those companies that you know of?

12:44:57 19 A. Off the top of my head and without  
12:45:00 20 refreshing it, as companies are being bought up and  
12:45:03 21 procured and change names, they include such people as  
12:45:07 22 ATC, AVX, Presidio, Kemet, USCC, Central Lab, Novacap,  
12:45:23 23 Murata, Eurofarad.

12:45:32 24 There's some Germans who have --

12:45:35 25 Those are -- Tucsonics. Those are some

12:45:38 1 of the current firms, some of them being much larger  
12:45:41 2 across the board and others being niche suppliers.  
12:45:44 3 Q. You've mentioned Murata.  
12:45:47 4 A. Yes.  
12:45:47 5 Q. I think it's a Japanese company.  
12:45:50 6 A. Yes.  
12:45:50 7 Q. But you're saying it's a U.S.  
12:45:54 8 manufacturer.  
12:45:54 9 I'm not sure --  
12:45:54 10 A. They have production facilities here in  
12:45:56 11 the U.S.  
12:45:57 12 Q. I see.  
12:45:58 13 So by "U.S. manufacturer", you mean if  
12:46:00 14 you have production facilities in the U.S.?  
12:46:02 15 A. Yes.  
12:46:02 16 Q. Okay.  
12:46:07 17 MR. SCHATZ: Timur, would now be a good time  
12:46:12 18 to break for lunch?  
12:46:12 19 Although you just indicated --  
12:46:12 20 You were going to ask another question.  
12:46:13 21 But are we getting close for a break for  
12:46:13 22 lunch?  
12:46:18 23 MR. SLONIM: Yes.  
12:46:18 24 Maybe another ten minutes?  
12:46:19 25 MR. SCHATZ: Fine.

12:46:20 1 BY MR. SLONIM:

12:46:21 2 Q. So when you say "U.S. manufacturer",  
12:46:25 3 regardless of the ultimate ownership or the origin of  
12:46:30 4 the company, it's whether there is a physical plant in  
12:46:34 5 the U.S. to make capacitors?

12:46:35 6 Is that --

12:46:36 7 A. Yes, that's been the term in which I use  
12:46:40 8 it.

12:46:41 9 Q. And in what context have you been using  
12:46:43 10 that term?

12:46:45 11 A. Precisely as we've stated it, that if  
12:46:49 12 you have a manufacturing facility and it usually with  
12:47:06 13 that goes along a sales force also based in the  
12:47:10 14 country, that you'd be considered a U.S. manufacturer.

12:47:17 15 Q. I'm sorry to interrupt. I thought you  
12:47:21 16 were --

12:47:21 17 A. No problem.

12:47:24 18 Q. And by "sales force", how do you define  
12:47:29 19 what sales force is?

12:47:31 20 A. People whose job occupation is primarily  
12:47:35 21 selling and finding customers for product.

12:47:38 22 Q. Do they have to be employees of the  
12:47:41 23 manufacturer to be considered sales force?

12:47:47 24 A. I'm sure some of them are reps who are  
12:47:51 25 on commission or otherwise tied in with that.

12:47:55 1 I'm sorry. I'm not a expert in that

12:48:00 2 aspect there.

12:48:01 3 Q. Let me just understand.

12:48:03 4 So let's say one person reps different

12:48:06 5 companies or sells capacitors for different companies.

12:48:10 6 You would consider that person to be a

12:48:12 7 sales force for all of the companies that this person

12:48:15 8 reps, right, represents and sells?

12:48:18 9 A. Yes.

12:48:19 10 There are direct sales people and there

12:48:23 11 are reps who sell for different companies, and then

12:48:27 12 there are distributors who distribute product and they

12:48:32 13 have sales people.

12:48:33 14 So it gets complicated.

12:48:36 15 Q. So the sales -- Is sales force an

12:48:40 16 additional --

12:48:40 17 Have a sales force in the U.S., is that

12:48:43 18 an additional requirement to having a manufacturing

12:48:47 19 plant in the U.S.?

12:48:49 20 A. No, they're just, in my experience,

12:48:52 21 usually not noncommittant.

12:48:59 22 If you have enough money to build a

12:49:00 23 factory and hire workers, you usually also have enough

12:49:03 24 money to have local sales people who can take

12:49:06 25 customers on tours of the facility and do other

12:49:10 1 things.

12:49:10 2 Q. And does the plant, the manufacturing  
12:49:15 3 plant, have to do all the operations of building  
12:49:20 4 capacitors from start to finish to be defined as a  
12:49:25 5 U.S. manufacturer?

12:49:28 6 A. Not currently.

12:49:30 7 There are -- Times have changed, and  
12:49:36 8 there are offshore and in Mexico and in other Latin  
12:49:41 9 American countries' plants which now do some of the  
12:49:44 10 operations, especially for commercial product.

12:49:49 11 Q. So even if you have certain operations  
12:49:51 12 conducted offshore or overseas or in some other  
12:49:56 13 countries other than the U.S., if you have a U.S.  
12:50:00 14 manufacturing plant that performed some operations on  
12:50:03 15 the capacitor in the chain of making the capacitor,  
12:50:06 16 the finished product, you would consider that  
12:50:09 17 capacitor to be U.S. made?

12:50:14 18 A. I've not had the chance to draw an  
12:50:16 19 opinion on what amount of and which operations needed  
12:50:21 20 to be done here geographically in the U.S. to be  
12:50:26 21 considered U.S.

12:50:28 22 Because times a have changed as more and  
12:50:30 23 more has gone offshore.

12:50:32 24 Q. And what is your understanding --

12:50:33 25 Is there a particular set of rules for

12:50:36 1 that, that somebody would apply?

12:50:40 2 How is that quantified and explained?

12:50:45 3 Is there a particular standard?

12:50:48 4 What's the --

12:50:49 5 A. My experience has been with military  
12:50:54 6 specifications of a higher reliability grade.

12:51:01 7 And what those people -- often based out  
12:51:06 8 of Cincinnati -- would deem a supplier of parts --

12:51:17 9 And they have been faced with more and  
12:51:20 10 more operations being done overseas for economic  
12:51:27 11 efficiency. And while I could guess from memory what  
12:51:31 12 it was back in the late '90s at the time this  
12:51:35 13 application was filed, I don't -- that would be a  
12:51:38 14 guess.

12:51:38 15 And I don't know exactly what they do  
12:51:41 16 nowadays as to offshore versus U.S.

12:51:55 17 MR. SLONIM: I think we can break for lunch  
12:51:57 18 now.

12:51:59 19 THE VIDEOGRAPHER: Going off the record.

12:52:01 20 The time is 12:51 hours.

12:52:03 21 (Whereupon a lunch recess was taken  
12:52:05 22 from 12:51 p.m. to 1:56 p.m.)

13:57:11 23 THE VIDEOGRAPHER: Back on the record.

13:57:15 24 The time is 13:56 hours.

13:57:18 25 BY MR. SLONIM:

13:57:22 1 Q. Dr. Ewell, are you familiar with the  
13:57:29 2 discoidal feed-through capacitors?  
13:57:29 3 Discoidal, d-i-s-c-o-i-d-a-l,  
13:57:36 4 feed-through capacitors?  
13:57:36 5 A. Yes.  
13:57:36 6 Q. Are any of them made in the U.S.?  
13:57:42 7 A. Yes.  
13:57:42 8 Q. And is -- And they're generally  
13:57:53 9 cylindrical in shape with one or more holes inside the  
13:57:58 10 body?  
13:57:59 11 A. The newest generation of them.  
13:58:01 12 Correct.  
13:58:02 13 Q. And if we were to consider a discoidal  
13:58:07 14 feed-through capacitor that is cylindrical in shape,  
13:58:10 15 which is one cylindrical hole through it, how many  
13:58:15 16 sides would you say that dielectric body of that  
13:58:19 17 discoidal capacitor has?  
13:58:22 18 MR. SCHATZ: I'm just going to caution the  
13:58:24 19 witness not to speculate or guess, especially if the  
13:58:27 20 witness has not developed opinions on certain issues.  
13:58:27 21 BY MR. SLONIM:  
13:58:33 22 Q. You may answer.  
13:58:46 23 A. The discoidal element, the ceramic  
13:58:50 24 element of feed-through capacitor, would have at a  
13:59:02 25 minimum the top and bottom sides. It would have the

13:59:08 1 inside and outside of the discoidal element.

13:59:15 2 Then there would also be more minor

13:59:19 3 sides where this feed-through post would be set up and

13:59:24 4 sort of locked into it.

13:59:29 5 Q. Is the post part of the dielectric body?

13:59:36 6 A. It's part of the feed-through capacitor.

13:59:41 7 Q. I'm referring in my question about

13:59:44 8 counting the sides to just the dielectric body of the

13:59:49 9 discoidal feed-through capacitor that is cylindrical

13:59:54 10 in form and has only one hole, cylindrical hole

13:59:58 11 through it.

13:59:59 12 A. And that discoidal element -- let's

14:00:04 13 distinguish it from an element of the feed-through

14:00:08 14 capacitor -- that which is made usually of ceramic, a

14:00:13 15 ceramic dielectric would have as a minimum four sides.

14:00:23 16 And I'd have to look at specific designs

14:00:25 17 to see whether I would count other sides.

14:00:31 18 So they all have as a minimum four

14:00:34 19 sides. They may well have additional sides required

14:00:40 20 to interface with this post.

14:00:43 21 Q. There would be additional sides, you're

14:00:45 22 saying --

14:00:45 23 A. Yes.

14:00:45 24 Q. -- in the dielectric body?

14:00:47 25 A. Yes.

14:00:49 1 Q. But it is possible to make a discoidal  
14:00:53 2 feed-through capacitor with just four sides?

14:00:58 3 Discoidal cylindrical with one  
14:01:02 4 cylindrical hole through it.

14:01:04 5 Would that dielectric body have four  
14:01:07 6 sides?

14:01:07 7 Is that right?

14:01:09 8 A. Theoretically, but not practically.

14:01:12 9 You want to be able to electrically  
14:01:16 10 connect with this post. And you usually need some  
14:01:21 11 surface in that dielectric element that matches a  
14:01:25 12 surface in the post.

14:01:30 13 So there would be an additional side or  
14:01:33 14 two. And I'd have to go back in and look at designs  
14:01:36 15 to say what's the minimum and what's typical.

14:01:45 16 Q. And would you say that where the  
14:01:51 17 discoidal capacitor would meet the requirements of  
14:01:55 18 Claim 1 of the 356 patent, of the one we were talking  
14:02:00 19 about --

14:02:00 20 A. Can I look?

14:02:01 21 Q. Absolutely.

14:02:02 22 A. I need to look at that claim.

14:02:04 23 Q. Claim 1, that's Exhibit 3, 356 patent.

14:02:10 24 I believe it starts at Column 12.

14:02:16 25 A. Column 12.

14:02:17 1 Q. Line 59.

14:02:20 2 MR. SCHATZ: And I'll just caution the witness

14:02:22 3 not to speculate if it requires developing opinions

14:02:26 4 that he has not yet developed.

14:02:26 5 BY MR. SLONIM:

14:02:31 6 Q. You may answer.

14:02:34 7 MR. SCHATZ: If it doesn't require you to

14:02:36 8 guess or speculate or if you require additional time

14:02:40 9 to form opinions.

14:03:05 10 THE WITNESS: I would need to look very

14:03:06 11 carefully at the wording here and at the design of the

14:03:15 12 discoidal feed-through capacitor you're talking about

14:03:18 13 to see whether it fits.

14:03:22 14 All of the contacts are talked about

14:03:26 15 being external. And, in deed, the discoidal element

14:03:38 16 involved in a feed-through capacitor has contacts on

14:03:41 17 the exterior surface in context of the interior

14:03:46 18 surface, the hole.

14:03:47 19 And so I'm not sure whether it meets

14:03:49 20 this or not.

14:03:49 21 (Whereupon Exhibit 5 was marked for

14:03:51 22 identification)

14:03:51 23 BY MR. SLONIM:

14:03:56 24 Q. Very well.

14:04:07 25 I'm placing before you what I've marked

14:04:09 1 as an Exhibit 5, which is an example of a discoidal  
14:04:14 2 capacitor, I think.

14:04:15 3 A. Okay.

14:04:15 4 Q. Would you identify for the record what  
14:04:25 5 this document appears to be?

14:04:26 6 I believe you probably haven't reviewed  
14:04:28 7 this before.

14:04:29 8 Is that correct?

14:04:30 9 A. That is correct. This is identified at  
14:04:33 10 its top as United States Patent Number  
14:04:42 11 US 6,545,854 B2, dated April 8, 2003.

14:04:55 12 Q. Let's say we turn to the second page of  
14:04:57 13 that exhibit. And there is a figure called Figure 2A.

14:05:02 14 A. I see that Figure 2A.

14:05:04 15 Q. Is that the discoidal capacitor -- an  
14:05:09 16 example of a discoidal -- cylindrical discoidal  
14:05:13 17 capacitor with one hole?

14:05:14 18 MR. SCHATZ: I'm going to object --

14:05:16 19 Are you finished with your question?

14:05:18 20 MR. SLONIM: Yes.

14:05:19 21 MR. SCHATZ: I'm going to object in that  
14:05:23 22 you've just handed the witness a patent that he  
14:05:26 23 admittedly has not yet reviewed.

14:05:28 24 And you're asking him to develop  
14:05:32 25 opinions and answer questions upon that. And it

14:05:36 1 necessarily requires speculation and guessing, and he  
14:05:43 2 hasn't had sufficient time to review.

14:05:45 3 I'll caution the witness, do not guess  
14:05:47 4 or speculate about things you have not developed  
14:05:49 5 opinions on.

14:05:49 6 BY MR. SLONIM:

14:05:50 7 Q. Is that a typical -- one of the  
14:05:52 8 discoidal capacitors you have had experience with, at  
14:05:59 9 least the shape of that capacitor?

14:05:59 10 A. The shape appears to be -- to have a  
14:06:01 11 definite opinion. I'd need to read the context.

14:06:04 12 Q. I'm not asking you about -- I'm just  
14:06:08 13 using this as a representative design or as a  
14:06:11 14 representative shape just to put some concrete things.

14:06:14 15 I'm not talking about what this patent  
14:06:16 16 discloses or doesn't or claims, and I understand that.  
14:06:19 17 That's not my question.

14:06:21 18 And in Figure 2B, would you --

14:06:26 19 A. Again, we're on Sheet 1 of 2 --

14:06:29 20 Q. Correct, of Exhibit 5.

14:06:32 21 A. Okay.

14:06:32 22 Q. Would you think this would be a  
14:06:36 23 representative cross section of that particular design  
14:06:41 24 of Figure 2A of the discoidal capacitor?

14:06:45 25 Does that look -- what you would expect

14:06:49 1 a discoidal capacitor -- one of the designs of the  
14:06:51 2 discoidal capacitor to have internal, electrodes and  
14:06:56 3 dielectric layers?

14:06:57 4 Is that --

14:06:58 5 MR. SCHATZ: Objection. Multiple compound  
14:07:01 6 question.

14:07:01 7 And again, I'll caution the witness not  
14:07:03 8 to speculate.

14:07:03 9 BY MR. SLONIM:

14:07:04 10 Q. You may answer.

14:07:12 11 A. The schematic shown in Figure 2B, I see,  
14:07:18 12 is an incomplete representation of the elements shown  
14:07:25 13 in 2A. But it may have been developed, and that's  
14:07:29 14 purely speculation, to highlight a particular feature  
14:07:35 15 of 2A.

14:07:37 16 Q. Are you familiar with any discoidal  
14:07:40 17 capacitors that look like Figure 2A, an actual design  
14:07:46 18 of a discoidal capacitor that would in the outward  
14:07:49 19 appearance look like a Figure 2A?

14:07:53 20 A. I have seen discoidal elements.

14:07:57 21 Q. By "elements", you mean a capacitor,  
14:08:01 22 Figure 2A?

14:08:05 23 A. It's -- I've never seen them used in  
14:08:09 24 that simple-looking configuration. I've always seen  
14:08:15 25 them built up into more complex devices where this is

14:08:19 1 simply one piece.

14:08:21 2 Q. But would one piece function as a

14:08:23 3 capacitor if you --

14:08:26 4 A. It would provide capacitance to it.

14:08:31 5 Q. Okay. And you're familiar with at least

14:08:35 6 one of such designs where there may be a battery of

14:08:40 7 these or an array of these capacitors, Figure 2A, that

14:08:46 8 you've seen in the course of your career?

14:08:49 9 A. I've not done a great many cross

14:08:52 10 sections to be able to say how representative the

14:08:57 11 schematic shown in 2B is of 2A.

14:09:04 12 You know, you need to take apart -- take

14:09:07 13 them apart and look at them in the microstructure to

14:09:10 14 say, hey, that's typical, or that's not typical.

14:09:13 15 I'm not able to do that.

14:09:17 16 Q. And what's the difference between a

14:09:19 17 schematic of a capacitor, let's say, of Figure 9A of

14:09:27 18 the 356 patent, and the cross section of --

14:09:32 19 What would be the difference of the

14:09:34 20 discoidal capacitor that you're saying you need more

14:09:39 21 familiarity?

14:09:40 22 I thought you cross section them, I

14:09:43 23 guess, using the same techniques to cross section?

14:09:46 24 MR. SCHATZ: I will counsel the witness not to

14:09:50 25 speculate and to form opinions on the spot when time

14:09:54 1 is required to do so.

14:09:54 2 BY MR. SLONIM:

14:09:57 3 Q. You may answer.

14:10:04 4 A. Referring to Figure 9A of the 356

14:10:12 5 patent, in this configuration, I have seen many more

14:10:20 6 examples so as to be familiar with the types and

14:10:26 7 arrangements of defects which one can consider both in

14:10:31 8 a typical and an atypical place.

14:10:34 9 I've not had enough depth of experience

14:10:38 10 to have that same consideration for the discoidal

14:10:42 11 configuration.

14:10:45 12 Q. And how does your experience with the

14:10:50 13 defects in the multi-layer capacitors relates to

14:10:57 14 Claim 1 of the 356 patent that is asserted against

14:11:02 15 ATC?

14:11:02 16 A. Let me read that.

14:11:03 17 Q. Absolutely.

14:11:04 18 I think that begins at column 12, line

14:11:08 19 59.

14:11:47 20 A. Now, can I get you to repeat your

14:11:50 21 question again?

14:11:50 22 I've read Claim 1.

14:11:51 23 Q. Yes.

14:11:52 24 How does your experience with the

14:11:53 25 defects in multi-layer capacitors relates to Claim 1

14:11:57 1 of the 356 patent?

14:12:01 2 MR. SCHATZ: I'll object to the vagarities of

14:12:04 3 the question with regard to the use of the term

14:12:07 4 "relate".

14:12:07 5 BY MR. SLONIM:

14:12:09 6 Q. You may answer.

14:12:17 7 A. Claim 1 does not relate to defects at

14:12:19 8 all. It simply relates to an arrangement of

14:12:22 9 dielectric plates and of conductive plates.

14:12:29 10 So I don't yet grasp the context that

14:12:32 11 you're talking about defects in this arrangement.

14:12:35 12 Q. Does Claim 1 require any particular --

14:12:42 13 Does Claim 1 require absence of any

14:12:45 14 defects in the capacitor encompassed by Claim 1 or

14:12:50 15 claimed in Claim 1 of the 356 patent?

14:12:53 16 MR. SCHATZ: I'm going to object to the extent

14:12:55 17 it requires drawing a legal conclusion as to the

14:12:57 18 meaning of the terms.

14:12:59 19 You're asking a expert witness to opine

14:13:02 20 on legal terms.

14:13:05 21 But subject to that objection, if you

14:13:06 22 can answer, feel free.

14:13:09 23 BY MR. SLONIM:

14:13:10 24 Q. You may answer.

14:13:17 25 A. In my opinion as one of ordinary skill

14:13:19 1 in the art, there are no capacitors completely free of  
14:13:23 2 defects. None of them are perfect.

14:13:26 3 Most capacitors are free from  
14:13:29 4 significant defects which will affect the operation  
14:13:32 5 over a period of time.

14:13:37 6 And I understand Claim 1 to be relating  
14:13:42 7 to such a usable capacitor, and therefore, there's an  
14:13:45 8 assumption that it can be manufactured of three of  
14:13:51 9 such significant defects.

14:13:54 10 Q. Where does the word "use" appear in  
14:13:58 11 Claim 1?

14:14:00 12 Can you point me to the line and read me  
14:14:02 13 the phrase where it says it has to be a usable  
14:14:05 14 capacitor or any variation of the word "use"?

14:14:13 15 A. I do not see that terminology there.

14:14:21 16 That's just part of my understanding as  
14:14:25 17 one of ordinary skill in the art, that one would only  
14:14:30 18 make a capacitor that could be usable, that that would  
14:14:35 19 be implied in making a capacitor that I would want to  
14:14:38 20 do something with.

14:14:40 21 Q. What if I didn't have a use for a  
14:14:43 22 capacitor?

14:14:44 23 I was just practicing my art, and I made  
14:14:47 24 a capacitor for which I didn't at this time have a  
14:14:51 25 use.

14:14:52 1 Would that be a capacitor?

14:14:56 2 A. Yes.

14:14:57 3 Q. And what if I find a use for it later?

14:15:00 4 Does that -- How does that relate to

14:15:01 5 Claim 1?

14:15:04 6 So let's say I made a capacitor. I

14:15:06 7 don't have any use for it.

14:15:08 8 You would say it's outside of the claim

14:15:10 9 of Claim 1?

14:15:11 10 A. No.

14:15:11 11 Q. It's within the scope of Claim 1?

14:15:13 12 A. Yes.

14:15:14 13 Q. But you just said in some instance, you

14:15:20 14 imply usage.

14:15:21 15 But I said to you in my hypothetical, I

14:15:23 16 don't have any particular use.

14:15:25 17 MR. SCHATZ: Objection. That's a

14:15:27 18 mischaracterization. It's frankly just a flat out

14:15:30 19 misunderstanding of the testimony. And therefore,

14:15:32 20 you're rephrasing the testimony earlier as deceptive.

14:15:36 21 I object to that extent.

14:15:37 22 BY MR. SLONIM:

14:15:37 23 Q. You may answer.

14:15:42 24 A. The use need not be in the immediate

14:15:49 25 timeframe of its manufacturing.

14:15:52 1 People manufacture capacitors or  
14:15:57 2 capacitor elements for which they anticipate there  
14:16:01 3 would be a use in the future, as well as immediate  
14:16:06 4 use.

14:16:08 5 And your example where you thought of a  
14:16:10 6 use not at the time of manufacturing but sometime in  
14:16:14 7 the future, to me would be encompassed in the usable  
14:16:19 8 capacitor.

14:16:21 9 Q. But does Claim 1 require usable  
14:16:24 10 capacitor?

14:16:25 11 MR. SCHATZ: Objection. Asked and answered.

14:16:27 12 The witness already answered your  
14:16:28 13 question.

14:16:28 14 BY MR. SLONIM:

14:16:29 15 Q. You may answer.

14:16:31 16 A. Is that --

14:16:32 17 Q. A requirement of Claim 1 as construed by  
14:16:38 18 the Court of the 356 patent.

14:16:40 19 A. And I don't know what's construed by the  
14:16:43 20 Court.

14:16:43 21 But I would say that one of ordinary  
14:16:47 22 skill in the art would consider a derivative  
14:16:53 23 requirement of something that they built was that it  
14:16:56 24 should be usable.

14:17:03 25 Q. Have you provided any opinions about

14:17:08 1 legal terms in your declaration that you've submitted  
14:17:11 2 to the Court in this case, which is Exhibit 2, I  
14:17:15 3 believe?

14:17:16 4 MR. SCHATZ: Objection. Vague.

14:17:16 5 BY MR. SLONIM:

14:17:20 6 Q. If you understand the question.

14:17:21 7 MR. SCHATZ: To the extent you understand the  
14:17:23 8 question, you can answer.

14:17:25 9 THE WITNESS: I have certainly given my expert  
14:17:29 10 opinion as to how a technical person of ordinary skill  
14:17:37 11 in the art interpret the term.

14:17:40 12 I have not attempted to say this is a  
14:17:43 13 legal interpretation with -- and deal with matters of  
14:17:47 14 precedence and stuff and legal definitions.

14:17:50 15 BY MR. SLONIM:

14:17:51 16 Q. What do you understand the function of  
14:17:53 17 the patent claims to be?

14:17:59 18 A. On the basis of very little legal  
14:18:03 19 education, I see a patent claim as -- once a patent is  
14:18:13 20 granted, as very similar to a government granted sole  
14:18:18 21 license to build and sell something that falls within  
14:18:24 22 the claim.

14:18:28 23 Q. And would it be fair to say that the  
14:18:30 24 owner of that license would have a legal right to  
14:18:33 25 exclude anybody else as not having that license from

14:18:37 1 making anything that falls within the claim?

14:18:40 2 Is that your understanding?

14:18:42 3 A. Let's ask that one more time, and I'll  
14:18:44 4 take it in pieces.

14:18:45 5 Q. And would it be fair to say that the  
14:18:49 6 owner of the patent claim would have a legal right to  
14:18:54 7 exclude or prevent anybody else who doesn't own the  
14:18:59 8 patent from making anything that falls within the  
14:19:03 9 scope of patent claims?

14:19:06 10 MR. SCHATZ: I'm going to object to the extent  
14:19:09 11 that you're asking an opinion regarding what is  
14:19:12 12 clearly a legal issue.

14:19:15 13 But the witness is allowed to answer to  
14:19:19 14 the extent he understands what rights a patent allots  
14:19:23 15 to someone, to the extent you know.

14:19:27 16 THE WITNESS: Speaking purely as amateur lay  
14:19:31 17 person, that's my understanding of what a patent  
14:19:34 18 grants.

14:19:35 19 BY MR. SLONIM:

14:19:36 20 Q. So you agree with me?

14:19:37 21 Is your answer to my question "yes"?

14:19:40 22 MR. SCHATZ: No, he --

14:19:41 23 I'm going to object.

14:19:42 24 He answered what he understands to be  
14:19:44 25 the case. He's not agreeing with anything you said.

14:19:48 1 He's just stating what he understands.

14:19:48 2 BY MR. SLONIM:

14:19:52 3 Q. And did you in preparation of your  
14:19:54 4 declaration, did you study the Claim Construction  
14:19:58 5 Order?

14:20:02 6 A. If that's -- And the terminology,  
14:20:06 7 "Claim Construction Order", is new to me. If that's  
14:20:09 8 one of the documents listed in my declaration, I did  
14:20:14 9 look through that.

14:20:17 10 Q. Why don't we take a look at your  
14:20:19 11 declaration, which is Exhibit 2.

14:20:25 12 It should be somewhere on the Page 2 at  
14:20:37 13 the top.

14:20:38 14 Could you tell me if you've listed the  
14:20:41 15 Claim Construction Order as one of the documents  
14:20:43 16 you've used in preparation?

14:20:45 17 A. Yes, it is down there on the list by  
14:20:48 18 that terminology, yes.

14:20:50 19 Q. And how long did you study that  
14:20:58 20 document?

14:21:02 21 A. I'd have to say less than ten hours.

14:21:04 22 Q. You spent ten hours exclusively reading  
14:21:08 23 that document?

14:21:10 24 A. Or a maximum of ten hours.

14:21:12 25 As I recall, it's a -- fairly thick, and

14:21:18 1 it's -- was a bit confusing as to how it was

14:21:21 2 structured, yes.

14:21:24 3 Q. And by fairly thick, you mean how many  
14:21:28 4 pages was it?

14:21:29 5 A. It appeared to be -- and this is pure  
14:21:33 6 memory without having it in front of me -- probably on  
14:21:37 7 the order of 30 or 40 pages or more.

14:21:41 8 Q. Let's see. I think I might have a copy  
14:21:49 9 I would like to show you to refresh your recollection.

14:21:57 10 MR. SLONIM: This should be Exhibit 6, I  
14:21:58 11 believe.

14:21:58 12 (Whereupon Exhibit 6 was marked for  
14:21:58 13 identification)

14:21:58 14 BY MR. SLONIM:

14:22:05 15 Q. I'm placing before you a document marked  
14:22:10 16 Exhibit 6.

14:22:11 17 A. Okay.

14:22:12 18 Q. Could you please identify it for the  
14:22:14 19 record?

14:22:16 20 A. I see over in the right-hand side, the  
14:22:21 21 words "Claim Construction Order" and "Civil Action No.  
14:22:30 22 08cv335 IEG (NLS)".

14:22:42 23 Q. Have you seen this document before this  
14:22:43 24 deposition?

14:22:45 25 A. Yes, I have.

14:22:46 1 Q. And do you know it as the

14:22:50 2 Claim Construction Order?

14:22:51 3 A. I do now.

14:22:59 4 Q. You didn't know it before this

14:23:00 5 deposition --

14:23:03 6 A. Well, I've seen the words there, but not

14:23:06 7 made -- I knew this more in terms of by the contents,

14:23:14 8 much of which is a proposed table of alternate

14:23:20 9 definitions for particular terms.

14:23:22 10 That's what it meant to my lay eyes.

14:23:24 11 Q. I see. I see.

14:23:27 12 And then when you said in your

14:23:28 13 declaration --

14:23:30 14 And when you refer in your declaration

14:23:32 15 to the Claim Construction Order as the document you've

14:23:35 16 used in preparation, were you referring to Exhibit 6,

14:23:39 17 the document --

14:23:39 18 A. Yes, I was.

14:23:39 19 Q. And how long did you study this

14:23:44 20 document?

14:23:47 21 A. I mentioned this was on the order of --

14:23:51 22 I'd have to say somewhere between 6 and 10 hours.

14:23:56 23 Q. Did you discuss this document with

14:23:57 24 anybody else, with anybody?

14:24:05 25 A. I believe I have discussed it with the

14:24:11 1 attorney to my right, Brett Schatz.

14:24:13 2 Q. Anybody else?

14:24:14 3 A. No.

14:24:14 4 Q. How long -- How many discussions with

14:24:18 5 Mr. Schatz did you have about this particular

14:24:20 6 document?

14:24:22 7 A. I recall no discussions which were

14:24:26 8 exclusively on this. But I believe this was mentioned

14:24:31 9 in at least three discussions.

14:24:35 10 Q. And do you have notes from those

14:24:37 11 discussions?

14:24:38 12 Did you take notes for any of those

14:24:42 13 three discussions you've mentioned?

14:24:44 14 A. I did.

14:24:44 15 I also have a yellow tagged copy of this

14:24:49 16 with notes of my own on it.

14:24:53 17 Q. Okay. And that document with your own

14:24:57 18 notes and your notes of the conversations are at your

14:25:00 19 house?

14:25:00 20 A. Yes.

14:25:00 21 Q. We would like to see them during the

14:25:04 22 inspection, or if it is possible, we would probably

14:25:09 23 ask that they be produced before the inspection, as

14:25:12 24 well as all of your notes of your conversations with

14:25:16 25 counsel that you've testified to here today.

14:25:19 1 MR. SCHATZ: Just to make it easy, if you  
14:25:22 2 would summarize your requests after the deposition so  
14:25:25 3 we know what you're looking for, and then we'll  
14:25:28 4 respond to those.

14:25:32 5 MR. SLONIM: I think we have an outstanding  
14:25:36 6 document request about that, but we'll discuss it  
14:25:38 7 after the deposition.

14:25:39 8 Q. What do you understand the  
14:25:43 9 Claim Construction Order to be?

14:25:55 10 A. I believe this to be a document which  
14:26:08 11 summarizes the arguments and presents the Court's  
14:26:21 12 findings as to the definition of certain specific  
14:26:27 13 terms that are in the 356 patent.

14:26:32 14 Q. And do you understand that the Court, by  
14:26:36 15 entering this Order, pronounced what those definitions  
14:26:40 16 are, announced them?

14:26:42 17 A. Yes.

14:26:42 18 Q. And --

14:26:44 19 A. I believe they are included in this.

14:26:46 20 Q. And if you look up at Page 16 of the  
14:26:51 21 Claim Construction Order, Exhibit 6, are those the  
14:26:55 22 definitions which you understand the Court said the  
14:26:59 23 words in certain claim elements in the 356 patent  
14:27:04 24 mean?

14:27:04 25 A. Yes, that's my understanding, that this

14:27:08 1 page summarizes the Court's construal, by which I  
14:27:13 2 assumed are findings, as to appropriate definitions  
14:27:17 3 for those six terms.

14:27:19 4 Q. And did you apply those definitions when  
14:27:25 5 you --

14:27:27 6 Did you follow these definitions when  
14:27:29 7 you were drafting your declaration?

14:27:32 8 A. I did.

14:27:32 9 Q. Is your declaration consistent, in your  
14:27:36 10 opinion, with the claim elements as they were  
14:27:42 11 construed by the Court?

14:27:45 12 A. That my declaration is in deed based on  
14:27:51 13 these specific definitions. And I think I quote them  
14:27:56 14 verbatim.

14:27:58 15 Q. And once you've quoted them, did you  
14:28:01 16 apply them the way the Court has construed them?

14:28:05 17 A. Applied them?

14:28:06 18 Q. In your declaration, to arrive at your  
14:28:10 19 opinions that you've expressed --

14:28:12 20 A. I used them, if that's what you mean by  
14:28:15 21 apply.

14:28:17 22 Q. Did you use them consistently with the  
14:28:20 23 way the Court has defined the respective elements, or  
14:28:24 24 did you deviate in any respect from any of the  
14:28:28 25 definitions of the Court when you gave your

14:28:34 1 declaration and arrived at the opinions that you've  
14:28:36 2 expressed in your declaration?

14:28:40 3 A. In my understanding, I have not deviated  
14:28:42 4 from any of these.

14:28:44 5 Q. In any way?

14:28:47 6 A. That's -- That's my current  
14:28:49 7 understanding, yes.

14:28:49 8 Q. If you would be so kind, could you  
14:28:58 9 direct me to the claim element that the Court has  
14:29:02 10 construed that requires a capacitor of Claim 1 to be a  
14:29:10 11 usable capacitor as you have told us before?

14:29:16 12 Do you see the word "usable capacitor"  
14:29:18 13 or "use" -- or any form of the word "use" in any of  
14:29:23 14 the terms from Claim 1 that the Court has construed?

14:29:28 15 MR. SCHATZ: Objection. Asked and answered.

14:29:29 16 The witness testified that the term  
14:29:32 17 "usable" does not appear in the claim language.

14:29:35 18 MR. SLONIM: Brett, if you would limit your  
14:29:38 19 objections to the objection in form and stop coaching  
14:29:42 20 the witness, I would appreciate that, and the Court  
14:29:45 21 would, too.

14:29:45 22 MR. SCHATZ: I'm not coaching the witness.  
14:29:47 23 What I'm trying to do is rectify insolubly ambiguous  
14:29:53 24 questions and ask that you not repeat questions that  
14:29:57 25 you've already asked in an attempt to illicit a

14:30:01 1 different response that you like better than you got  
14:30:04 2 the first time around.

14:30:05 3 MR. SLONIM: I would appreciate if your  
14:30:07 4 speeches and coaching the witness would stop.

14:30:09 5 Q. You may answer.

14:30:13 6 A. I do not see in my reading -- my quick  
14:30:22 7 reading at this point anything which implies or  
14:30:27 8 directly states that usability is part of a  
14:30:33 9 definition.

14:30:33 10 I believe my previous answer related to  
14:30:36 11 how one of ordinary skill in the art would interpret.

14:30:42 12 Q. Is there a difference between a legal  
14:30:49 13 definition as given by the Court in this Order and the  
14:30:53 14 understanding of the one of ordinary skill in the art?

14:30:57 15 A. Definitely.

14:30:58 16 Q. And when you were giving your opinions  
14:31:09 17 in the declaration, did you follow your understanding  
14:31:13 18 as one of ordinary skill in the art as opposed to the  
14:31:17 19 Court's definitions, the legal definitions the Court  
14:31:22 20 has provided?

14:31:23 21 A. I did not see a contradiction between  
14:31:27 22 them. So I did not choose one or the other.

14:31:34 23 I've attempted, I think in good justice,  
14:31:38 24 to fit both.

14:31:44 25 Q. But do you have a different definition

14:31:48 1 than the Court has given for the -- let's say the  
14:31:50 2 first element, substantially monolithic dielectric  
14:31:50 3 body?

14:31:56 4 And could you read into the record the  
14:31:56 5 Court's definition that you see on Page 16 of  
14:31:59 6 Exhibit 6?

14:32:03 7 A. Number 1 -- which I believe relates to a  
14:32:08 8 particular disputed term -- "Substantially Monolithic  
14:32:14 9 Dielectric Body: A dielectric body largely but not  
14:32:21 10 wholly without seams from the inclusion of plates  
14:32:26 11 within the dielectric body.

14:32:30 12 Q. And you understand this to be the  
14:32:35 13 Court's definition of the term "substantially  
14:32:38 14 monolithic dielectric body"?

14:32:40 15 A. I understand that to be so.

14:32:41 16 Q. What is your definition of that term as  
14:32:44 17 one of ordinary skill in the art?

14:32:48 18 MR. SCHATZ: Objection to the extent you're  
14:32:51 19 asking if the witness has a definition versus whether  
14:32:55 20 it's applied by one of ordinary skill in the art.

14:32:55 21 BY MR. SLONIM:

14:33:00 22 Q. You may answer.

14:33:05 23 A. As one of ordinary skill in the art, I  
14:33:12 24 believe that to make this definition typically  
14:33:25 25 applicable, that the definition would be expanded

14:33:31 1 upon, and the way which I have to talk about what it  
14:33:39 2 means to be largely but not wholly without seams.

14:33:46 3 And in my declaration, I point to a sign  
14:33:52 4 that there are seams as being the presence of voids  
14:33:56 5 and gaps.

14:34:00 6 Q. So you think the way the Court has  
14:34:02 7 defined this claim element, substantially monolithic  
14:34:07 8 dielectric body, it is vague?

14:34:11 9 A. No. I believe it to be quite  
14:34:15 10 determinable. And I was talking about how one of  
14:34:19 11 ordinary skill in the art would go about determining  
14:34:23 12 whether such seams are largely but not wholly present.

14:34:29 13 And one would go about determining that  
14:34:32 14 by looking at whether there's an inordinate amount of  
14:34:37 15 voids and gaps at the seam location.

14:34:43 16 Those are merely indicators that a seam  
14:34:45 17 is there.

14:34:47 18 Q. And how many voids --

14:34:50 19 How many seams would you say this  
14:34:55 20 definition requires, the Court's definition of the  
14:35:01 21 substantially monolithic dielectric body?

14:35:04 22 MR. SCHATZ: Objection.

14:35:05 23 Is your question phrased in regard to  
14:35:08 24 number?

14:35:12 25 MR. SLONIM: Let's first start with a number,

14:35:15 1 yes.

14:35:15 2 THE WITNESS: You would get a seam wherever  
14:35:17 3 you have an electrically conductive plate in contact  
14:35:25 4 with a dielectric layer which had been placed on top  
14:35:30 5 of it, so that you'd get one seam for each plate.

14:35:34 6 BY MR. SLONIM:

14:35:34 7 Q. And is there a seam --

14:35:45 8 If you plate a layer of metal on a  
14:35:51 9 dielectric, would you consider that there is a seam  
14:35:51 10 between that layer of metal and the dielectric on  
14:35:54 11 which it is plated?

14:35:56 12 A. On which it is deposited?

14:35:57 13 Q. Deposited.

14:36:03 14 A. Not -- No, because --

14:36:10 15 Again, I'm giving a technical  
14:36:12 16 explanation. I have it to offer if you would like it.

14:36:16 17 Q. Please go ahead.

14:36:20 18 A. I've talked about the dielectric layer,  
14:36:23 19 in this case being ceramic powder, within a polymeric  
14:36:28 20 binder.

14:36:29 21 I talked about the electrically  
14:36:31 22 conductive layer, code name "ink", as being metal  
14:36:38 23 powder within a polymeric binder.

14:36:40 24 Now, they are laid down on top of each  
14:36:42 25 other, and there's some interdiffusion in

14:36:47 1 interconnection of the two polymeric binders. So you  
14:36:51 2 don't really have a seam there.

14:36:57 3 Q. And how many seams would you consider  
14:37:01 4 that the dielectric body largely but not wholly  
14:37:05 5 without seams from the inclusion of plates within the  
14:37:07 6 dielectric body can have in order to be a  
14:37:11 7 substantially monolithic dielectric body?

14:37:18 8 A. You could have a seam and a practical  
14:37:32 9 definition have as a seam, which one of ordinary skill  
14:37:37 10 in the art would be -- it would be visible somehow.

14:37:42 11 If I cannot see it by typical means of  
14:37:47 12 detection through either cross sectioning or  
14:37:50 13 fracturing and looking at the scanning on an electron  
14:37:56 14 microscope, it's effectively not there.

14:37:58 15 But I could have one seam for each plate  
14:38:01 16 included within that brick or chip.

14:38:07 17 Q. Now, let's say we make an assumption  
14:38:10 18 that for each layer of the metal and the dielectric on  
14:38:14 19 top of it, there is a seam that is visible --

14:38:16 20 A. Sure.

14:38:17 21 Q. -- under some method of detection.

14:38:20 22 A. Right.

14:38:20 23 Q. How many of these seams could a  
14:38:23 24 dielectric body have in order to meet this claim  
14:38:27 25 limitation as construed by the Court?

14:38:36 1 A. I don't see there being a claim  
14:38:40 2 limitation on the number of seams involved. I don't  
14:38:44 3 get a logical construction of that.

14:38:49 4 Q. What does it mean, "largely but not  
14:38:52 5 wholly"?

14:38:54 6 Does that imply a particular number to  
14:38:56 7 you?

14:38:56 8 A. No.

14:38:57 9 Q. Is that a -- basically a phrase of  
14:39:04 10 degree?

14:39:06 11 A. A vague phrase of degree.  
14:39:17 12 That's speaking from a technical sense.

14:39:21 13 Q. And so you would not be able to apply  
14:39:24 14 this Court's definition the way it's written now.

14:39:28 15 Is that your conclusion?

14:39:30 16 A. No, that's -- that's not my conclusion.

14:39:33 17 As one of ordinary skill in the art, if  
14:39:37 18 I could make a body, which I believe embodies Claim 1,  
14:39:41 19 I could fracture it and look at it by one of the means  
14:39:45 20 we've talked about and say, hey, I can't see many  
14:39:50 21 seams. I have 40 layers here. I can see three seams,  
14:39:54 22 five seams, ten seams, but that's it.

14:39:57 23 I believe that would meet largely but  
14:39:59 24 not wholly without it, without seams.

14:40:08 25 Q. So you're saying if you had 40 layers of

14:40:12 1 dielectric and metal, largely but not wholly could be  
14:40:19 2 what percentage of seams, you're saying?  
14:40:25 3 A. I would expect less than half. But  
14:40:28 4 exactly how would depend upon the magnification of the  
14:40:32 5 microscope I used and how the sample was prepared.  
14:40:36 6 Q. I see. I see.  
14:40:39 7 And in the 356 patent, did you see a  
14:40:44 8 mention --  
14:40:44 9 Have you studied the 356 patent, which  
14:40:47 10 is Exhibit 3, I think?  
14:40:51 11 A. Yes.  
14:40:51 12 Q. How many hours did you spend studying  
14:40:55 13 this patent?  
14:40:57 14 A. I'd have to say on the order of six  
14:40:59 15 hours.  
14:40:59 16 Q. And when was that?  
14:41:03 17 A. That was in two sessions, at least:  
14:41:09 18 Once before the declaration, and once when I knew  
14:41:14 19 there was to be a deposition afterwards.  
14:41:17 20 Q. I see.  
14:41:18 21 So a part of the six-hour review time of  
14:41:23 22 the 356 patent was after you've submitted your  
14:41:29 23 declaration?  
14:41:29 24 A. A much smaller percentage of time, yes.  
14:41:32 25 The majority of time was spent before.

14:41:37 1 Afterwards, it was spent reviewing my understanding of  
14:41:40 2 it.

14:41:41 3 Q. And in your review of the patent, had  
14:41:49 4 you done an adequate review in your opinion of the  
14:41:52 5 patent?

14:41:55 6 A. From -- adequate from a technical point  
14:41:57 7 of view with understanding what is being claimed.

14:42:03 8 Q. And this was a sufficiently detailed  
14:42:08 9 review based on which you could submit a declaration  
14:42:13 10 to the Court?

14:42:14 11 A. Yes.

14:42:14 12 Q. You did not need any additional time to  
14:42:18 13 study the patent in order to make your declaration --  
14:42:28 14 in order to express anything else in the declaration.

14:42:31 15 Is that --

14:42:35 16 A. I was asked to provide a declaration on  
14:42:41 17 some very specific areas of disagreement about the  
14:42:49 18 meaning of claims as related to one of ordinary skill  
14:42:54 19 in the art.

14:42:54 20 And I think you have pointed out on  
14:42:57 21 Exhibit 6, Page 16, those very specific claims.

14:43:02 22 So my review was from the point of view  
14:43:05 23 of understanding those claims in context with the  
14:43:10 24 patent, and then understanding what one of ordinary  
14:43:16 25 skill in the art through my various interactions and

14:43:21 1 background would believe.

14:43:24 2 So it was from a particular point of  
14:43:26 3 view.

14:43:27 4 Q. I see.

14:43:28 5 And by disagreement about the meaning of  
14:43:30 6 claims, what are you referring to?

14:43:34 7 A. I'm in effect referring to the  
14:43:40 8 Claim Construction Order, Exhibit 6, and to the  
14:43:46 9 contents of this, which in my technical opinion relate  
14:43:53 10 to disagreement on six particular claims for which the  
14:43:59 11 Court has findings or construing.

14:44:04 12 Excuse my mangling of the technical  
14:44:07 13 term, if there are construing.

14:44:10 14 Q. And what time did that disagreement  
14:44:12 15 happen?

14:44:13 16 What's your understanding about the  
14:44:15 17 timing of that disagreement?

14:44:16 18 A. I did not look at that when the various  
14:44:19 19 pieces of papers were filed.

14:44:21 20 Q. That's fine.

14:44:22 21 Is it your understanding that this  
14:44:24 22 disagreement has been resolved?

14:44:29 23 A. I have an understanding that the Court  
14:44:32 24 has found on six specific terms and the appropriate  
14:44:39 25 definition for those disputed terms.

14:44:41 1 Q. So is it your understanding that the  
14:44:44 2 Court has resolved the disagreement about the meaning  
14:44:48 3 of those specific terms?

14:44:50 4 A. I guess I'm not -- I'm not familiar with  
14:44:53 5 how you're using "resolved".

14:44:55 6 I do not know whether there can or have  
14:44:58 7 been any further related legal appeals or not.

14:45:04 8 Q. Looking at the Claim Construction  
14:45:10 9 Order --

14:45:10 10 A. Right.

14:45:10 11 Q. -- is it your understanding that the  
14:45:13 12 Claim Construction Order, after consideration of the  
14:45:17 13 arguments from both sides, from the position of one of  
14:45:22 14 ordinary skill in the art that was presented to the  
14:45:25 15 Court, has resolved what the meaning of the specific  
14:45:30 16 terms in dispute was?

14:45:36 17 A. In a legal sense, yes.

14:45:37 18 Q. What about in a technical sense?

14:45:43 19 A. I believe the Court's findings have  
14:45:48 20 given a very good and determinable definition to the  
14:45:57 21 terms.

14:45:58 22 How they would put in -- be put in  
14:46:00 23 practice by one of ordinary skill in the art, by one  
14:46:05 24 trying to design such product, I believe would require  
14:46:12 25 still some further specificity which can easily be

14:46:16 1 made.

14:46:19 2 You know, they would be --

14:46:21 3 As I have attempted in some cases to  
14:46:23 4 translate between the definitions and how one of  
14:46:29 5 ordinary skill in the art would make in terms of  
14:46:35 6 designing such a capacitor, that translation would  
14:46:39 7 have to be made.

14:46:39 8 Q. And could you mention to me all the  
14:46:48 9 things or parameters or however you want to call it in  
14:46:51 10 the Court's Claim Construction Order that require  
14:46:54 11 further specificity as you have just testified about?

14:47:04 12 A. May we go down and --

14:47:05 13 Again I'm --

14:47:06 14 Q. Element by element.

14:47:08 15 A. And I'm doing this without a full chance  
14:47:17 16 to study and to contemplate these terms.

14:47:25 17 But the first would be the phrase  
14:47:27 18 "largely but not wholly without seams", what does that  
14:47:32 19 mean to one who has a cross section of a product in  
14:47:37 20 front of them.

14:47:41 21 Q. Would you expect to find the answer to  
14:47:44 22 that question in the 356 patent?

14:47:48 23 MR. SCHATZ: I'll object.

14:47:51 24 To one of ordinary skill in the art?

14:47:56 25 Your question is vague without that

14:47:59 1 context.

14:47:59 2 BY MR. SLONIM:

14:48:00 3 Q. Do you see an answer to that question

14:48:04 4 or --

14:48:04 5 Did you see in terms of your review of

14:48:06 6 the patent in answer to my -- in answer to your

14:48:12 7 question in the specification of the 356 patent?

14:48:15 8 MR. SCHATZ: And I'll object.

14:48:16 9 Are you asking that question in the eyes

14:48:18 10 of someone of ordinary skill in the art, or not?

14:48:22 11 The question is vague.

14:48:22 12 BY MR. SLONIM:

14:48:25 13 Q. Could you direct me to the part of the

14:48:27 14 356 patent that you believe answers that question?

14:48:33 15 MR. SCHATZ: Same objection.

14:48:34 16 Are you referring to the question in

14:48:36 17 regard to the eyes of someone of ordinary skill in the

14:48:40 18 art, or not?

14:48:43 19 MR. SLONIM: To the extent Dr. Ewell claims to

14:48:45 20 be of ordinary skill, I guess he's the only one

14:48:48 21 present here.

14:48:49 22 Q. So unless you can put yourself into the

14:48:51 23 mind of a person who is not of ordinary skill --

14:48:56 24 MR. SLONIM: I guess we'd have to take it

14:48:58 25 through the eyes of Dr. Ewell, who is the only

14:49:01 1 deponent here.

14:49:05 2 THE WITNESS: And so your question is, if I  
14:49:10 3 can attempt to understand it, can I find further  
14:49:16 4 clarifying words in the 356 patent as one of ordinary  
14:49:23 5 skill in the art which would enable me to make a  
14:49:27 6 practical decision on whether a specific product in  
14:49:32 7 front of me was largely but not wholly without seams?

14:49:38 8 Q. Does the Court Order require a practical  
14:49:41 9 decision?

14:49:42 10 Where is the word "practical" in that  
14:49:46 11 definition that the Court gave?

14:49:52 12 A. I do not see the word "practical" here.

14:49:59 13 Q. Correct.

14:49:59 14 So why are you using the word  
14:50:03 15 "practical" or requiring the practical aspect if the  
14:50:08 16 Court did not use the word "practical" or "require  
14:50:12 17 practicality" of this?

14:50:18 18 A. I believe the Court has provided  
14:50:23 19 definitions, definitions that are to be used within  
14:50:27 20 the context of the 356 patent.

14:50:34 21 And my understanding is that one of  
14:50:39 22 ordinary skill in the art, given a -- given product,  
14:50:48 23 given a capacitor, should be able to look at that by  
14:50:57 24 whatever means they are used to using, and providing  
14:51:03 25 whatever interpretations come from their experience to

14:51:07 1 say that this product does or does not meet the  
14:51:13 2 requirements of the claims of this patent.

14:51:21 3 Am I incorrect in that understanding?

14:51:24 4 Q. What is your expert opinion on that?

14:51:27 5 A. I believe that's a legal opinion as to  
14:51:30 6 meeting claims of the -- of a patent.

14:51:39 7 I'd take you for the expert here, sir.

14:51:42 8 Q. You may be the only one in the room that  
14:51:45 9 thinks that. Certainly, your counsel doesn't share  
14:51:47 10 that view.

14:51:48 11 A. But my question was directed to you.

14:51:51 12 Q. Thank you.

14:51:53 13 May I redirect your attention to  
14:51:57 14 Figure 9A of the 356 patent, which is Exhibit 3.

14:52:11 15 A. Okay. I'm now at Sheet 2 of 7, and I  
14:52:16 16 have Figure 9A which has been annotated by myself.

14:52:21 17 Q. Excellent.

14:52:22 18 And now what I would ask you to do,  
14:52:25 19 assume that Figure 9A is a fair representation of an  
14:52:31 20 actual capacitor in cross section.

14:52:36 21 Would you be able to tell me, applying  
14:52:39 22 the Court's definition of "substantially monolithic  
14:52:43 23 dielectric body", whether Figure -- capacitor that in  
14:52:51 24 cross section looks like Figure 9A, has a  
14:52:55 25 substantially monolithic dielectric body?

14:53:00 1 A. By having actual product in front of me  
14:53:05 2 that I could take a cross section of, and being one of  
14:53:11 3 ordinary skill in the art, I believe that I could with  
14:53:16 4 that cross section decide whether this body fits or  
14:53:24 5 does not fit the description of being largely but not  
14:53:29 6 wholly without seams.

14:53:29 7 Q. Excellent.

14:53:30 8 Why don't you do that right now.

14:53:32 9 Let's say you've obtained with your  
14:53:33 10 level of magnification that you wanted the picture  
14:53:38 11 that in cross section is Figure 9A in the patent, and  
14:53:45 12 tell me whether that capacitor with that cross section  
14:53:51 13 meets the definition of a dielectric body largely but  
14:53:54 14 not wholly without seams from the inclusion of plates  
14:53:57 15 within the dielectric body.

14:54:00 16 A. Figure 9A is a low magnification  
14:54:05 17 schematic. We would take an actual microstructural  
14:54:15 18 cross section, and in deed at significantly higher  
14:54:20 19 magnifications, have to look at that. And to look  
14:54:26 20 specifically at the seams to see whether they would  
14:54:31 21 meet that.

14:54:31 22 So I'm -- This is not an adequate  
14:54:35 23 example or representation for me to be able to do  
14:54:38 24 that.

14:54:38 25 Q. Are you saying that one of ordinary

14:54:42 1 skill in the art would not be able from Figure 9A to  
14:54:45 2 tell whether the -- it meets the Court's definition or  
14:54:50 3 not?

14:54:50 4 A. Meets the Court's definition for --

14:54:55 5 Q. Substantially monolithic dielectric  
14:54:59 6 body.

14:54:59 7 A. That is correct.

14:54:59 8 Q. Thank you.

14:55:00 9 MR. SLONIM: We should change the tapes.

14:55:02 10 THE VIDEOGRAPHER: This marks the end of tape  
14:55:03 11 Number 2 in the deposition of Gary Ewell.

14:55:05 12 Going off the record.

14:55:06 13 The time is 14:54 hours.

14:55:13 14 (Whereupon a recess was taken)

15:12:01 15 THE VIDEOGRAPHER: Back on the record.

15:12:13 16 Here marks the beginning of tape

15:12:15 17 Number 3 in the deposition of Gary Ewell.

15:12:16 18 The time is 15:11 hours.

15:12:19 19 BY MR. SLONIM:

15:12:21 20 Q. Dr. Ewell, could you please turn your  
15:12:23 21 attention to Figure 2A, as in "alpha," of the 356  
15:12:28 22 patent, which is Exhibit 3?

15:12:31 23 A. Okay.

15:12:38 24 Q. And if you were presented with the  
15:12:42 25 Figure 2A as a cross section of a capacitor, would you

15:12:47 1 be able to tell me under the Court's definition of  
15:12:53 2 "substantially monolithic dielectric body", that that  
15:12:58 3 capacitor represented by Figure 2A would meet that  
15:13:02 4 definition?

15:13:04 5 MR. SCHATZ: Objection.

15:13:05 6 Are you saying that the micrograph would  
15:13:08 7 be the figure, itself?

15:13:10 8 BY MR. SLONIM:

15:13:15 9 Q. You may answer my question if you  
15:13:16 10 understand it.

15:13:19 11 MR. SCHATZ: Objection. Vague.

15:13:25 12 THE WITNESS: If I were given a suitably  
15:13:30 13 prepared cross structure and micrograph at the  
15:13:38 14 magnification I required of the capacitor  
15:13:43 15 schematically shown in 2A, and just using the skills  
15:13:51 16 of one of ordinary skill in the art, I believe, yes, I  
15:13:57 17 could see with respect to claim Number 1 that I could  
15:14:02 18 determine whether that particular capacitor as  
15:14:08 19 represented by that micrograph met or did not meet  
15:14:12 20 that definition of the -- in Term 1.

15:14:18 21 BY MR. SLONIM:

15:14:18 22 Q. Assume that Figure 2A is a micrograph at  
15:14:27 23 the magnification that you required for this  
15:14:29 24 particular capacitor.

15:14:33 25 Given that assumption, could you tell me

15:14:38 1 whether a capacitor represented by the cross section  
15:14:41 2 presented at the -- that particular level of  
15:14:44 3 magnification would meet or not meet the Court's  
15:14:49 4 definition of "substantially monolithic dielectric  
15:14:56 5 body"?

15:14:57 6 A. As I understand it, if I had the  
15:15:02 7 micrograph at suitable magnification and suitable  
15:15:06 8 preparation conditions of a capacitor schematically  
15:15:11 9 represented in 2A, yes, given that micrograph, I could  
15:15:15 10 tell.

15:15:16 11 Q. Does Figure 2A --  
15:15:18 12 I'm asking you to assume that Figure 2A  
15:15:23 13 represents that level of magnification that you  
15:15:26 14 required.

15:15:27 15 A. It doesn't meet that.

15:15:30 16 Q. I'm asking you to assume that it is.

15:15:32 17 You're an expert. You can tell me what  
15:15:36 18 you -- based on certain assumptions, what your  
15:15:39 19 opinions would be.

15:15:39 20 So I'm asking you to assume that  
15:15:43 21 Figure 2A represents a cross section at the level of  
15:15:47 22 magnification you wanted to be able to give me and the  
15:15:57 23 Court an opinion whether that capacitor represented by  
15:16:01 24 Figure 2A meets or does not meet the definition of  
15:16:07 25 "substantially monolithic dielectric body" as provided

15:16:12 1 by the Court.

15:16:13 2 MR. SCHATZ: I'm going to object.

15:16:13 3 BY MR. SLONIM:

15:16:16 4 Q. Do you understand what assumption I'm  
15:16:18 5 asking you to make?

15:16:19 6 A. I seem to hear -- let me reflect my  
15:16:22 7 assumption -- you're saying somehow assume that this  
15:16:30 8 drawing represents a real microstructure at a real  
15:16:35 9 magnification that I need.

15:16:37 10 Q. Correct.

15:16:37 11 A. And therefore, does Term 1 apply or not  
15:16:41 12 apply.

15:16:41 13 Q. Absolutely.

15:16:43 14 A. And my eyes deceive me. It's not at the  
15:16:47 15 right magnification, and it's not prepared  
15:16:50 16 appropriately for me to do that.

15:16:55 17 Q. So you're -- Sitting here today, you're  
15:16:59 18 unable to answer that question.

15:17:01 19 Is that right?

15:17:05 20 A. Give me a real micrograph, and I can  
15:17:07 21 answer it.

15:17:09 22 I cannot answer it with this schematic  
15:17:12 23 here. This is a drawing.

15:17:14 24 Q. Have you seen any micrographs in the 356  
15:17:17 25 patent of a real structure of any of the capacitors

15:17:22 1 claimed in the 356 patent?

15:17:24 2 A. No, I haven't. But the combination of

15:17:29 3 schematics here, the total set of them, plus the

15:17:34 4 wording of the patent, plus the Court's definition,

15:17:39 5 provide me the tools that given real product, I could

15:17:43 6 decide, yes, it meets, no, it doesn't meet.

15:17:43 7 THE REPORTER: Did you say could or couldn't

15:17:43 8 decide?

15:18:04 9 THE WITNESS: I could decide. Could,

15:18:05 10 positively, definitely.

15:18:08 11 BY MR. SLONIM:

15:18:08 12 Q. So are you saying that Figure 2A does

15:18:21 13 not represent a real product?

15:18:26 14 A. Correct. It's a schematic, in my

15:18:31 15 terminology as an engineer, a representation.

15:18:36 16 Q. So that Figure 2A would not tell one of

15:18:42 17 ordinary skill in the art whether a capacitor made

15:18:46 18 according to the schematic would meet that claim

15:18:49 19 limitation or not.

15:18:50 20 Is that your testimony?

15:18:52 21 MR. SCHATZ: Objection. Mischaracterization

15:18:54 22 of the testimony.

15:18:54 23 BY MR. SLONIM:

15:18:55 24 Q. You may answer.

15:19:00 25 A. I believe that the contents of the

15:19:05 1 complete patent, all of the figures, all of the words,  
15:19:11 2 and the Court's definition would provide me as one of  
15:19:15 3 ordinary skill in the art the ability to give a real  
15:19:20 4 sample, hard sample, cross section in front of me to  
15:19:25 5 say whether it meets or does not meet.

15:19:30 6 But I can't single out one piece of the  
15:19:32 7 patent and say that's enough, that's all I need.

15:19:38 8 Q. Do you see that additional --

15:19:40 9 Did you see that additional description  
15:19:42 10 in the patent that in conjunction with Figure 2A could  
15:19:46 11 give you that level of detail and magnification that  
15:19:50 12 you require in order to determine whether a capacitor  
15:19:55 13 represented schematically by Figure 2A meets or does  
15:19:59 14 not meet the Court's definition of "substantially  
15:20:04 15 monolithic dielectric body"?

15:20:05 16 A. No, that comes from my experience of one  
15:20:07 17 of ordinary skill in the art, the magnification I  
15:20:10 18 would have to use and any preparation techniques on  
15:20:15 19 the capacitor, itself.

15:20:17 20 Q. Are you saying that the magnification  
15:20:20 21 level and the preparation techniques are not specified  
15:20:23 22 in the patent?

15:20:28 23 A. My study to date of the patent does not  
15:20:32 24 show that level of detail, how I would have to examine  
15:20:37 25 it.

15:20:39 1 But the -- I believe that a designer at  
15:20:43 2 a capacitor house would have at his or her behest  
15:20:50 3 enough knowledge and tools to be able to choose the  
15:20:54 4 microscope and have the experience to prepare sampling  
15:20:57 5 to make that judgment.

15:21:03 6 Q. Do you see any visible seams on  
15:21:15 7 Figure 2A?

15:21:23 8 A. I don't see any seams.

15:21:24 9 I see lines which are meant to indicate  
15:21:28 10 seams, but I see no real seams on 2A.

15:21:42 11 Q. So would you say based on the fact that  
15:21:45 12 you don't see seams on Figure 2A, that this dielectric  
15:21:50 13 body is without seams?

15:21:55 14 A. I'm not able to make that judgment.

15:21:59 15 2A is a drawing. 2A is not actual  
15:22:01 16 product.

15:22:04 17 Q. If I asked you to assume that 2A  
15:22:07 18 represents an actual product, this is the picture at  
15:22:11 19 the highest level of magnification available at the  
15:22:17 20 particular point in time, and this is presented to  
15:22:17 21 you.

15:22:19 22 And I asked you to tell me whether you  
15:22:22 23 see visible seams here.

15:22:24 24 Is that your testimony, that you don't  
15:22:25 25 see any seams?

15:22:29 1 A. My testimony would be, if that this was  
15:22:33 2 a true representation of a cross section through the  
15:22:38 3 capacitor, it did not involve any etching thermally or  
15:22:46 4 chemically, I would say I am able to detect seams  
15:22:50 5 there.

15:22:55 6 Q. I don't believe you've answered my  
15:22:57 7 question.

15:23:01 8 A. Please --

15:23:01 9 Q. I've asked you whether, assuming that  
15:23:05 10 this is an actual product and an actual picture at the  
15:23:09 11 highest level of magnification available to you --

15:23:13 12 A. Right.

15:23:14 13 Q. -- whether looking at this picture, you  
15:23:18 14 can tell me whether there are visible seams to you or  
15:23:22 15 not.

15:23:24 16 A. And I said with the understanding that  
15:23:27 17 what I'm looking at is a cross section that has not  
15:23:32 18 been etched, e-t-c-h-e-d, either thermally or  
15:23:41 19 chemically, that I can then say that I see seams  
15:23:45 20 there.

15:23:48 21 Q. Assuming that this has been prepared to  
15:23:52 22 your satisfaction and etched chemically and thermally,  
15:23:56 23 and this is what came out as a result of that etching  
15:24:00 24 and at the highest level of magnification available to  
15:24:05 25 you, there's nothing else you can do better or

15:24:08 1 different to obtain a different picture?

15:24:11 2 A. I would have it be without etching for  
15:24:15 3 my first examination, no etching. And I would expect  
15:24:20 4 not to see at this magnification seams.

15:24:32 5 Q. So is your testimony that there are no  
15:24:37 6 seams in Figure 2A, or you don't expect seams in the  
15:24:42 7 Figure 2A?

15:24:43 8 I'm not sure I quite get your answer.

15:24:46 9 A. My testimony is that the appearance of  
15:24:50 10 2A leads me to conclude there are observable seams.

15:24:57 11 Q. How many?

15:25:01 12 A. One for each internal electrically  
15:25:05 13 conductive plate.

15:25:09 14 Q. Could you count them for me, please?

15:25:20 15 And if you need to label them  
15:25:22 16 individually so we can talk about particular ones,  
15:25:25 17 that would be helpful, too, if that assists you.

15:25:36 18 A. I see 13 internal seams in the drawing  
15:25:43 19 of Figure 2A in the 356 patent.

15:25:48 20 Q. And based on that count, could you now  
15:25:52 21 tell me whether that dielectric body with 13 seams in  
15:25:59 22 it meets the Court's definition of "substantially  
15:26:04 23 monolithic dielectric body" as provided in Exhibit 6,  
15:26:09 24 Claim Construction Order by the Court?

15:26:11 25 And I believe you have Page 16 of that

15:26:14 1 order in front of you.

15:26:15 2 A. Let me state, first, I have never seen a  
15:26:23 3 cross section that looks like -- like this that has  
15:26:27 4 such evident seams.

15:26:31 5 But if this in deed is representative of  
15:26:34 6 real product and I compared it with the wording here  
15:26:39 7 on Page 16 of Exhibit 6, I would have to say that it  
15:26:45 8 does not meet a definition here of Term 1, that it is  
15:26:52 9 not largely but not wholly without seams.

15:27:17 10 Q. So from that, would you conclude that  
15:27:20 11 this dielectric body is not substantially monolithic  
15:27:25 12 as defined by the Court, if you're saying it does not  
15:27:29 13 meet this definition?

15:27:30 14 MR. SCHATZ: I'm just going to object.

15:27:32 15 Given the assumptions that you posed  
15:27:34 16 with your initial question, is that how you're asking  
15:27:37 17 your question?

15:27:40 18 BY MR. SLONIM:

15:27:40 19 Q. You may answer.

15:27:42 20 A. That this hypothetical capacitor in 2A,  
15:27:51 21 I find does -- would not be considered as  
15:27:56 22 substantially monolithic.

15:28:01 23 Q. What would you consider this capacitor  
15:28:03 24 to be, then, if it's not substantially monolithic?

15:28:06 25 How would you describe it?

15:28:14 1 A. Less than substantially monolithic would  
15:28:20 2 probably be the way I would describe it.

15:28:24 3 Q. So you would say it's below the level of  
15:28:27 4 substantial monolithic by saying "less than"?

15:28:33 5 A. Right.

15:28:37 6 That substantially monolithic is a bar,  
15:28:40 7 a level above which you're substantially below, you're  
15:28:45 8 less than substantially or insubstantially.

15:28:49 9 But I don't know if that's a phrase.

15:28:51 10 Q. Is that one of the phrases you would use  
15:28:53 11 as one of ordinary skill in the art in referring to  
15:28:58 12 the dielectric bodies in substantially monolithic --

15:29:02 13 A. No.

15:29:02 14 Q. Would you use a phrase "substantially  
15:29:04 15 monolithic," as one ordinary skill --

15:29:07 16 In your practice, have you used that  
15:29:09 17 phrase referring to any of the dielectric bodies you  
15:29:12 18 have encountered in your 24 years at  
15:29:15 19 Aerospace Corporation?

15:29:19 20 A. My time at Aerospace has been primarily  
15:29:23 21 with single chips or blocks.

15:29:27 22 Q. Okay.

15:29:28 23 A. And in which the focus is are they  
15:29:31 24 monolithic or not.

15:29:34 25 And this, I would say, is not monolithic

15:29:37 1 if this were an accurate representation of a real part  
15:29:42 2 where the seams were so obvious in the condition in  
15:29:47 3 which I examined it.

15:29:54 4 I have not had a great experience with  
15:30:00 5 arrays of capacitors as we talked about where two  
15:30:04 6 individual chips might be at some stage sintered  
15:30:11 7 together in a third operation.

15:30:15 8 Q. And is it your understanding that a  
15:30:20 9 capacitor of Figure 2A is made by sintering two  
15:30:24 10 discrete parts by a third sintering step?

15:30:28 11 A. No.

15:30:29 12 I would interpret this as having gone  
15:30:35 13 through the easiest manufacturing process, which would  
15:30:41 14 be a single sintering step.

15:30:48 15 Q. That was my understanding, too.

15:30:50 16 If we can move to Claim Element Number 2  
15:30:59 17 for which the Court was asked and gave construction,  
15:31:04 18 could you please read the -- that element and the  
15:31:09 19 Court's construction into the record from the Court's  
15:31:12 20 Claim Construction Order, which is Exhibit 6?

15:31:15 21 A. Page 16 of Exhibit 6, Roman numeral 2,  
15:31:20 22 the claim element is: "A conductive first contact  
15:31:27 23 disposed externally on the dielectric body and  
15:31:32 24 electrically connected to the first plate," colon, in  
15:31:38 25 nonbold words, "a conductive material arranged on an

15:31:44 1 external surface portion of the substantially  
15:31:48 2 monolithic dielectric body and having an electrical  
15:31:52 3 connection with the first plate."

15:32:11 4 Q. I believe you've testified previously  
15:32:15 5 that there were certain number of parameters or  
15:32:21 6 characteristics that in the Court's Claim Construction  
15:32:27 7 Order required further specificity.

15:32:29 8 Is this element one of them?

15:32:32 9 MR. SCHATZ: I'm going to object to the extent  
15:32:35 10 it calls for speculation in that I do not believe the  
15:32:38 11 witness has formed any opinions with respect to the  
15:32:42 12 question that was asked.

15:32:43 13 And I will counsel the witness not to  
15:32:47 14 speculate if that is the case.

15:32:50 15 MR. SLONIM: I would remind Mr. Schatz that  
15:32:51 16 the witness has been offered as an expert, potentially  
15:32:58 17 in a relevant art. And as an expert, he has studied  
15:33:02 18 this Claim Construction Order, and I think believe  
15:33:05 19 testified for about ten hours, at least.

15:33:09 20 And based on that study, I would like  
15:33:13 21 the witness to clarify whether this element as  
15:33:16 22 construed by the Court would require what Dr. Ewell  
15:33:22 23 said previously, further specificity.

15:33:25 24 MR. SCHATZ: Same objection.

15:33:26 25 If you need more time to make that

15:33:28 1 opinion, please do not speculate or guess.

15:33:28 2 BY MR. SLONIM:

15:33:31 3 Q. You may answer.

15:33:34 4 A. I would like to see the appropriate  
15:33:39 5 wording and associated drawings in the 356 patent to  
15:33:47 6 understand how this legal terminology relates to a  
15:33:55 7 more practical description that I might be familiar  
15:34:00 8 with.

15:34:03 9 Q. Are you saying that the Court's  
15:34:07 10 Claim Element Number 2 as the Court has given you the  
15:34:10 11 definition, you cannot apply it without an  
15:34:19 12 additional -- doing something additional?

15:34:20 13 A. I would like to see it in context how is  
15:34:25 14 that claim, a conductive first contact, in what  
15:34:29 15 wording has that claim been used within the patent and  
15:34:32 16 what drawings are offered to explain what they're  
15:34:36 17 talking about.

15:34:40 18 Q. Have you done that in preparation for  
15:34:44 19 your declaration?

15:34:46 20 A. Yes.

15:34:46 21 Q. With that understanding, if we can refer  
15:34:51 22 to Figure 2A of the 356 patent, Exhibit 3, what do you  
15:34:56 23 understand the Element 12 to be, the element labeled  
15:35:05 24 12 on Figure 2A?

15:35:06 25 A. I called this an electrically --

15:35:14 1 Let's see.

15:35:16 2 In the manufacturing world, we call that  
15:35:21 3 a termination, by which we mean on an external  
15:35:29 4 electrical contact of one polarity.

15:35:35 5 Q. And does that meet the Court's  
15:35:41 6 definition of a conductive first contact?

15:35:45 7 A. Whether it's the first or second  
15:35:47 8 contact, it is a conductive contact disposed  
15:35:51 9 externally on the dielectric body, yes.

15:35:55 10 I can't tell from -- without reference,  
15:35:58 11 whether it's an appropriate first or second contact.

15:36:01 12 Q. How would you be able to decide whether  
15:36:04 13 it's a first or a second contact?

15:36:06 14 A. By reading where it fits within the  
15:36:07 15 patent to see whether they've talked about the  
15:36:10 16 right-hand termination Number 13 in 2A is -- before as  
15:36:17 17 being first.

15:36:19 18 Q. Are you saying that the first and the  
15:36:23 19 second contact are interchangeable?

15:36:27 20 A. That first and second relate to order of  
15:36:30 21 discussion, not to right-hand side and left-hand side.

15:36:36 22 Q. And are you saying that you can refer to  
15:36:39 23 either of the contacts, either on the right side or  
15:36:44 24 the left side, as first?

15:36:45 25 Is that your --

15:36:46 1 A. Logically, first.

15:36:47 2 But to do so within the context of

15:36:51 3 talking about this particular term, I'd need to see

15:36:54 4 how it's used in the patent.

15:37:00 5 Q. And you haven't done that in your study

15:37:02 6 of the patent?

15:37:03 7 Have you been able to determine that?

15:37:05 8 A. I have done that as part of my review

15:37:08 9 since the declaration.

15:37:10 10 Q. I see.

15:37:11 11 Have you done that as part of your

15:37:12 12 review before the declaration?

15:37:14 13 A. Yes.

15:37:14 14 Q. And what opinion did you form at that

15:37:17 15 time?

15:37:18 16 A. My opinion is given in the declaration,

15:37:25 17 that I can --

15:37:27 18 Given this definition, given the actual

15:37:33 19 words there in the patent, and given the associated

15:37:40 20 drawing, I can understand quite clearly which one

15:37:45 21 they're referring to by the conductive first contact

15:37:48 22 disposed externally on the dielectric body.

15:37:52 23 I can understand that.

15:37:53 24 MR. SCHATZ: I'm going to caution --

15:37:57 25 MR. SLONIM: I don't think there is a pending

15:37:59 1 question.

15:37:59 2 MR. SCHATZ: Well, I'm going to make a

15:38:02 3 comment. Fine. I'm going to make a comment.

15:38:02 4 MR. SLONIM: Brett, I think --

15:38:03 5 MR. SCHATZ: I'm making a comment. And you

15:38:06 6 can try --

15:38:06 7 MR. SLONIM: This will come out of your time.

15:38:08 8 MR. SCHATZ: You can kind of override me as

15:38:10 9 much as you want. But I'm going to make a notation to

15:38:13 10 make sure the record is clear.

15:38:13 11 There are two --

15:38:15 12 I want to make sure the witness is

15:38:16 13 clear.

15:38:17 14 There are two references to first and

15:38:19 15 second. There's a conductive --

15:38:22 16 MR. SLONIM: Brett, I believe --

15:38:24 17 Q. Dr. Ewell, would you please leave the

15:38:26 18 room?

15:38:26 19 I don't think there is a pending

15:38:27 20 question.

15:38:28 21 Let Mr. Schatz make his comment on the

15:38:30 22 record outside of your presence, and then we'll invite

15:38:33 23 you to come back here.

15:38:35 24 MR. SLONIM: And, Mr. Schatz, please wait for

15:38:37 25 your speech. You will make your speech on the record,

15:38:39 1 and Dr. Ewell will come back and then I'll ask my next  
15:38:42 2 question.

15:38:43 3 Q. Dr. Ewell, why don't you leave the room,  
15:38:44 4 please.

15:38:44 5 (Whereupon Dr. Ewell left the deposition  
15:38:49 6 room)

15:38:49 7 MR. SCHATZ: I'll just make a note for the  
15:38:52 8 record that there are two references to the terms  
15:38:54 9 "first" and "second". There's a reference to a  
15:38:56 10 conductive first contact, and a conductive second  
15:38:59 11 contact.

15:39:00 12 There's also a reference to a first and  
15:39:02 13 second fringe effect capacitance.

15:39:05 14 And I think it's clear from Dr. Ewell's  
15:39:08 15 declaration that one of those topics has been  
15:39:11 16 addressed by him, and the other topic has not.

15:39:14 17 And I think the witness is unclear as to  
15:39:19 18 what is in his declaration, and what is not.

15:39:22 19 And I think it's appropriate for Counsel  
15:39:24 20 to inform Dr. Ewell to look at his declaration rather  
15:39:29 21 than ask these questions without any context.

15:39:32 22 That's my note for the record.

15:39:36 23 MR. SLONIM: Are you finished with your  
15:39:39 24 commentary?

15:39:40 25 MR. SCHATZ: I'm finished.

15:39:41 1 MR. SLONIM: Why don't we invite Dr. Ewell

15:39:44 2 back.

15:40:02 3 (Whereupon Dr. Ewell entered the

15:40:05 4 deposition room)

15:40:21 5 BY MR. SLONIM:

15:40:25 6 Q. Dr. Ewell, could you please read into

15:40:33 7 the record the Court's Claim Construction of Element

15:40:37 8 Number 4 as stated in the Order -- in the Claim

15:40:43 9 Construction Order, Exhibit 6, Page 16?

15:40:48 10 A. Number 4, in bold print: "The second

15:40:52 11 contact being located sufficiently close to the first

15:40:58 12 contact to form a first fringe effect capacitance with

15:41:04 13 the first contact," colon, unbold print, "an end of

15:41:12 14 the first conductive contact and an end of the second

15:41:17 15 conductive contact are positioned in an edge-to-edge

15:41:22 16 relationship in such proximity as to form a

15:41:27 17 determinable capacitance."

15:41:32 18 Q. Looking at Figure 2A --

15:41:38 19 A. Okay.

15:41:38 20 Q. -- as a cross section of a capacitor or

15:41:43 21 a schematic representation of a capacitor design,

15:41:48 22 would you please tell me whether that figure, whether

15:41:54 23 the capacitor of that figure meets or does not meet

15:41:58 24 the Court's definition of the fourth element that

15:42:02 25 you've just read into the record, the second contact

15:42:04 1 being located sufficiently close, and so on?

15:42:10 2 And you can take your time if you need

15:42:13 3 to.

15:42:14 4 A. Sure.

15:42:22 5 By the second contact and the first

15:42:25 6 contact, I'm assuming they mean both of those being

15:42:30 7 disposed externally on the dielectric body such that

15:42:37 8 in Figure 2A, we're talking about Elements 12 and 13.

15:42:44 9 Q. That's my understanding.

15:42:46 10 A. Okay.

15:42:50 11 And 14, for something to meet the

15:42:55 12 requirements of 14, that these two elements, the ends

15:43:04 13 of 12 and the ends of 13, which are positioned

15:43:11 14 alongside the top dielectric body shown in 2A such

15:43:18 15 that they have an edge-to-edge relationship --

15:43:23 16 And the question is, are they in such

15:43:26 17 proximity as to form a determinable capacitance in

15:43:33 18 order for me to see whether the body represented by 2A

15:43:38 19 meets the definition in 4 on Page 16 of Exhibit 6, I

15:43:49 20 would have to attempt to determine or measure to see

15:43:53 21 whether I got a measurable capacitance across those

15:43:56 22 ends.

15:43:58 23 Q. And would I be correct to understand you

15:44:03 24 that you -- that the word "determinable" in the

15:44:07 25 Court's Claim Construction, determinable capacitance,

15:44:15 1 one way that you can determine a capacitance would be  
15:44:15 2 to measure it?

15:44:17 3 A. That's one way, is to directly measure  
15:44:19 4 it, yes.

15:44:19 5 Q. Are there any other ways to determine a  
15:44:22 6 capacitance?

15:44:23 7 A. If this capacitor were part of a more  
15:44:36 8 complex array of capacitors, I might well have to  
15:44:43 9 indirectly measure it by seeing whether the presence  
15:44:48 10 or lack of this edge fringe effect capacitor affected  
15:44:55 11 at all the properties of the entire array.

15:45:03 12 Q. Assume that the entire capacitor is the  
15:45:08 13 capacitor reflected in Figure 2A. It doesn't have  
15:45:15 14 anything more, it doesn't have anything less.

15:45:18 15 Could you tell me whether the capacitor  
15:45:21 16 represented by Figure 2A would meet the definition of  
15:45:25 17 Claim Element Number 4?

15:45:28 18 And I think we've narrowed that question  
15:45:30 19 down to whether it has a determinable capacitance.

15:45:34 20 Would that be fair to say?

15:45:37 21 A. That is fair to say.

15:45:39 22 There are actually -- In Figure 2A,  
15:45:43 23 there are two fringe effect capacitors: One located  
15:45:47 24 on the top, and one located on the bottom of the  
15:45:53 25 capacitors shown in 2A.

15:45:57 1 So from a practical sense, as one of  
15:46:04 2 ordinary skill in the art could do, I could take that  
15:46:08 3 capacitor. I would take it as it exists, and I would  
15:46:17 4 measure its properties over the band of frequency of  
15:46:21 5 concern.

15:46:23 6 Not only its capacitance, but its data  
15:46:26 7 loss, its insertion loss. Those key properties.

15:46:31 8 Then I would remove the portion of  
15:46:40 9 this -- the external contacts on the top surface, make  
15:46:45 10 those measurements, remove them on the bottom surface,  
15:46:48 11 and make those measurements a third time.

15:46:52 12 If I compared all three sets of  
15:46:57 13 measurements, if within experimental air they were the  
15:47:01 14 same, I would say any fringe effect capacitor that  
15:47:04 15 might have been formed in the top or bottom was not  
15:47:08 16 measurable, and therefore, was not determinable.

15:47:13 17 But if I did see an effect -- and  
15:47:17 18 hopefully half the effect would go away when I removed  
15:47:20 19 the top one and half the effect would go away when I  
15:47:23 20 removed the bottom one so I had three sets of  
15:47:26 21 points -- I would say, yes, I had determinable fringe  
15:47:31 22 effect capacitors on that specific product.

15:47:36 23 Q. Could you direct me in the Court's Claim  
15:47:39 24 Construction of Element Number 4 to the words  
15:47:43 25 "insertion loss"?

15:47:53 1 A. I would have to look at where that  
15:47:58 2 particular term, the amounts in bold, are used within  
15:48:04 3 the patent to see whether it at all relates to the  
15:48:11 4 properties of a broadband ceramic capacitor array.

15:48:17 5 In this extract from the patent, I don't  
15:48:22 6 see them there.

15:48:23 7 Q. Do you understand the Court's Claim  
15:48:26 8 Construction to be the extract from the patent of  
15:48:29 9 Claim Element Number 4?

15:48:31 10 A. I understand this to be defining the  
15:48:35 11 specific words in bold.

15:48:43 12 Q. Correct.

15:48:44 13 And what do you think --

15:48:46 14 And what do you understand from the  
15:48:47 15 Claim Construction Order that the Court's definition  
15:49:01 16 of that term was based on?

15:49:09 17 A. My understanding is a speculation, but I  
15:49:17 18 believe that the Court was presented with the opposing  
15:49:26 19 definitions and the Court heard materials presented at  
15:49:33 20 that point, whether it's all orally, whether some of  
15:49:36 21 it was written, and said I believe this in the Court's  
15:49:43 22 understanding is what is meant by that term.

15:49:50 23 Q. Did you submit any opinions about  
15:49:54 24 appropriate Claim Construction in this case?

15:50:01 25 A. I submitted no opinions before this

15:50:05 1 Claim Construction Order was filed.

15:50:08 2 Q. Did you do that after this Claim

15:50:11 3 Construction Order was filed?

15:50:16 4 A. I submitted no opinions on what the  
15:50:20 5 definition should be before or after.

15:50:29 6 Q. Do you intend to do that?

15:50:32 7 A. I've not been asked to do so. I don't  
15:50:34 8 intend to voluntarily do so.

15:50:37 9 Q. Fair enough.

15:50:45 10 If I direct your attention to Page 14 --

15:51:01 11 A. Of?

15:51:02 12 Q. -- of Exhibit 6, the Claim Construction  
15:51:06 13 Order --

15:51:07 14 Maybe let's start with Page 13.

15:51:08 15 A. Okay.

15:51:10 16 Q. Do you see on Page 13 the Roman numeral  
15:51:15 17 Number 4 that in bold print says "The second contact  
15:51:21 18 being located sufficiently close to the first contact  
15:51:24 19 to form a first fringe effect capacitance with the  
15:51:29 20 first contact"?

15:51:30 21 Do you see that?

15:51:32 22 A. I see those words at approximately line  
15:51:34 23 6 of Page 13 of 16.

15:51:37 24 Q. And what do you understand the following  
15:51:40 25 language in the Court's Claim Construction Order

15:51:44 1 refers to on Page 13 following that heading and on to  
15:51:51 2 Page 14?  
15:51:51 3 MR. SCHATZ: I'll counsel the witness not to  
15:51:53 4 speculate to the extent you haven't formed any  
15:51:55 5 opinions about that.  
15:51:56 6 BY MR. SLONIM:  
15:51:56 7 Q. Let me ask a different question.  
15:51:58 8 Have you reviewed this language in  
15:51:59 9 preparation of your declaration?  
15:52:04 10 Have you reviewed this language in the  
15:52:05 11 Claim Construction Order on Pages 13 and 14 about  
15:52:09 12 Element -- Claim Element Number 4?  
15:52:14 13 A. Sometime back, I did review that.  
15:52:21 14 It is not close to the surface of my  
15:52:25 15 mind, my remembrance of having read the specific words  
15:52:30 16 here on Page 13 and 14.  
15:52:32 17 Q. Okay. And with that, I would ask you to  
15:52:37 18 read on Page 14 the Court's Order that follows the  
15:52:49 19 Roman -- the small Roman numeral 2 under the heading  
15:52:53 20 "Analysis".  
15:52:55 21 Would you please do that?  
15:53:00 22 A. I'm reading from Page 14 of Exhibit 6,  
15:53:06 23 starting at line three, small Roman numeral -- small  
15:53:13 24 numeral 2.  
15:53:16 25 "Analysis: The effect on high frequency

15:53:21 1 performance is not mentioned in Claim 1, and nowhere  
15:53:27 2 in the specification is the effect on high frequency  
15:53:31 3 performance explained. There is simply no  
15:53:34 4 justification for introducing the language advanced by  
15:53:39 5 Presidio into the construction of the disputed claim  
15:53:43 6 term."

15:53:45 7 Q. Do you agree with that statement?

15:53:49 8 A. That this is -- That those are the words  
15:53:51 9 there?

15:53:54 10 I read that I'm reading the correct  
15:53:56 11 words on the page.

15:53:59 12 Q. And my question, now that you've read  
15:54:01 13 the words on the page, do you agree with that  
15:54:05 14 statement in the Court's Order?

15:54:08 15 A. I would -- I agree that is the Court's  
15:54:12 16 Order.

15:54:12 17 I would have to reread Claim 1 to say,  
15:54:18 18 yeah, I agree.

15:54:20 19 There's no mention of high  
15:54:24 20 performance -- high frequency performance at all. And  
15:54:27 21 that nowhere in the specification, 16 pages, do they  
15:54:32 22 mention effect on high frequency performance.

15:54:38 23 But given that, I can be glad to  
15:54:42 24 speculate that given this is true, what would you like  
15:54:45 25 to know?

15:54:51 1 Q. Have you had a chance to read Claim 1 of  
15:54:55 2 356?  
15:54:56 3 A. I have.  
15:54:56 4 Q. Would you agree with the Court that the  
15:54:59 5 effect on high frequency performance is not mentioned  
15:55:01 6 in Claim 1?  
15:55:03 7 A. I would have to reread it. I do not  
15:55:05 8 have it memorized.  
15:55:06 9 Q. Please do so now.  
15:55:08 10 A. May I?  
15:55:09 11 Q. Absolutely.  
15:55:09 12 A. Thank you.  
15:55:13 13 Q. Any time.  
15:55:14 14 MR. SCHATZ: Excuse me?  
15:55:14 15 BY MR. SLONIM:  
15:55:16 16 Q. Any time, you can read the materials  
15:55:18 17 that you think are appropriate.  
15:55:21 18 A. Okay. So I'm reading the Claim 1 which  
15:55:23 19 starts in Column 12 of the 356 patent.  
15:55:39 20 And I agree with the Court that nowhere  
15:55:43 21 in Claim 1 do they talk about high frequency  
15:55:49 22 performance.  
15:55:57 23 BY MR. SLONIM:  
15:55:57 24 Q. Do you also agree with the Court that  
15:56:00 25 nowhere in this specification is the effect on high

15:56:04 1 frequency performance explained, as I've quoted from  
15:56:09 2 Page 14 of the Court's Claim Construction Order?

15:56:12 3 MR. SCHATZ: I'm just going to counsel the  
15:56:14 4 witness not to speculate on a -- what is or is not  
15:56:18 5 contained in the very long detailed patent.

15:56:23 6 THE WITNESS: I can't without reading it.

15:56:25 7 BY MR. SLONIM:

15:56:26 8 Q. Have you done that analysis in  
15:56:28 9 preparation for your declaration?

15:56:33 10 A. I've not specifically read the entire  
15:56:37 11 patent to see if they talk about -- to see if they use  
15:56:41 12 the words "high frequency performance" or the close  
15:56:45 13 equivalent of. I've not done that.

15:56:48 14 Q. Did you submit your opinions about  
15:56:54 15 definiteness of Claim Element Number 4 in your  
15:56:57 16 declaration?

15:56:58 17 A. I did.

15:56:58 18 Q. That is Exhibit 2?

15:57:00 19 A. I did.

15:57:00 20 Q. And in order to prepare that  
15:57:03 21 declaration, you did not study the entirety of the  
15:57:07 22 specification?

15:57:08 23 Is that your testimony?

15:57:09 24 MR. SCHATZ: Objection. That's a  
15:57:10 25 mischaracterization.

15:57:11 1 The question was whether or not the  
15:57:12 2 patent has language regarding high frequency  
15:57:15 3 performance.

15:57:16 4 You're misconstruing the witness'  
15:57:19 5 testimony, and it's deceptive.

15:57:22 6 MR. SLONIM: I would appreciate that you would  
15:57:25 7 state the objection to form, and we will move on.

15:57:27 8 Q. And let me repeat the question, which is  
15:57:30 9 a different question.

15:57:32 10 And in order to prepare your declaration  
15:57:36 11 where you expressed opinions about claim element  
15:57:41 12 Number 4, did you search the specification for the  
15:57:48 13 explanation of what high frequency performance means  
15:57:54 14 in the 356 patent?

15:57:58 15 A. No.

15:58:00 16 But from my background as one of  
15:58:07 17 ordinary skill in the art, I am, A, familiar with  
15:58:14 18 fringe effect capacitors and where they are used,  
15:58:18 19 which is high performance.

15:58:20 20 I'm also familiar with industry  
15:58:24 21 expression "broadband capacitor". And I know that to  
15:58:30 22 encompass broad frequency band which -- of which the  
15:58:32 23 high frequency RF end of the spectrum is perhaps the  
15:58:37 24 most important.

15:58:38 25 So given that context, I understood that

15:58:41 1 fringe effect capacitors are of most significance in  
15:58:46 2 this high frequency end.

15:58:49 3 Q. And in the Court's Claim Construction,  
15:58:52 4 could you read me the words that the determinable  
15:58:58 5 capacitance -- any words that say anything about the  
15:59:04 6 fringe effect having a broadband performance that  
15:59:09 7 you've just testified about?

15:59:10 8 Is there anything about that in the  
15:59:13 9 Court's Construction of that Claim Element Number 4?

15:59:15 10 A. What pages are you asking me to read to  
15:59:17 11 look for those words?

15:59:19 12 Q. Right on Page 14 under the Roman numeral  
15:59:24 13 3, "Construction", the same construction as is on  
15:59:29 14 Page 16, he's also presented here.

15:59:33 15 And reading that construction, which I  
15:59:36 16 believe starts on a line between Lines 9 and 10 --

15:59:44 17 And it reads: "As an end of the first  
15:59:47 18 conductive contact and an end of the second conductive  
15:59:51 19 contact are positioned in an edge-to-edge relationship  
15:59:55 20 in such proximity as to form a determinable  
16:00:00 21 capacitance."

16:00:00 22 A. Yes.

16:00:01 23 Q. In that language, do you see any mention  
16:00:03 24 of the word "broadband performance"?

16:00:06 25 A. No.

16:00:06 1 Q. Do you see any mention of the word

16:00:08 2 "broadband capacitor"?

16:00:10 3 A. No.

16:00:10 4 Q. Do you understand that Claim 1 does not  
16:00:12 5 require broadband capacitor?

16:00:17 6 And if you need to review Claim 1,  
16:00:19 7 please do so.

16:00:21 8 A. Let me quickly --

16:00:22 9 Q. Absolutely.

16:00:33 10 A. I do not see as part of Claim 1 in the  
16:00:38 11 356 capacitor, words stating that this capacitor will  
16:00:45 12 be used only in broadband applications or only in high  
16:00:50 13 frequency.

16:00:51 14 I see nothing about its applications at  
16:00:54 15 all.

16:00:59 16 Q. So it is not limited to --

16:01:04 17 A. Broadband.

16:01:06 18 It can be broadband. It cannot be  
16:01:07 19 broadband. I see nothing there to help me understand  
16:01:12 20 which application it might be constricted to.

16:01:18 21 Q. So any capacitor --

16:01:20 22 Is that your understanding that any  
16:01:23 23 capacitor that has the elements as specified in  
16:01:27 24 Claim 1 and as construed by the Court, would meet that  
16:01:33 25 Claim 1 regardless of its usage or affect?

16:01:37 1 MR. SCHATZ: Objection. Mischaracterization  
16:01:38 2 of the testimony.

16:01:38 3 BY MR. SLONIM:

16:01:40 4 Q. You may answer.

16:01:45 5 A. Let's go over that one more time. Your  
16:01:48 6 question is not an easy one.

16:01:56 7 Q. So is it your understanding that any  
16:01:59 8 capacitor that has the elements as recited in Claim 1  
16:02:07 9 and as some of them were construed by the Court, and  
16:02:13 10 if a capacitor meets those elements, regardless of its  
16:02:19 11 use, use of the capacitor, that you would say that  
16:02:27 12 that capacitor is within the scope of Claim 1?

16:02:33 13 MR. SCHATZ: Objection. Calls for  
16:02:35 14 speculation.

16:02:36 15 I counsel the witness not to speculate  
16:02:38 16 as to things you've not formed an opinion about.

16:02:50 17 THE WITNESS: I am -- My understanding of  
16:02:54 18 patent law is limited in that I understand there is  
16:03:01 19 something special about Claim 1 with respect to  
16:03:05 20 subsequent claims.

16:03:08 21 But I am not fully conversant with all  
16:03:13 22 that implies to be in Claim 1.

16:03:19 23 BY MR. SLONIM:

16:03:19 24 Q. Considering Claim 1 by itself, without  
16:03:22 25 being concerned of the following claims in the patent,

16:03:27 1 is it your opinion that Claim 1 does not require any  
16:03:31 2 particular use of the capacitor that meets the  
16:03:34 3 limitations of Claim 1?

16:03:36 4 MR. SCHATZ: Objection. Vague.

16:03:36 5 BY MR. SLONIM:

16:03:38 6 Q. You may answer.

16:03:42 7 A. While I do not see specific words in  
16:03:48 8 Claim 1 as to the effect of use in a broadband  
16:03:55 9 application, I am not sufficiently conversant with  
16:04:06 10 patent law as to notice how much of the words  
16:04:11 11 previously to the discussion of Claim 1 can be  
16:04:16 12 construed as to apply or not.

16:04:23 13 But I could certainly -- were you to cut  
16:04:26 14 out the words "Claim 1" and provide on a separate  
16:04:29 15 piece of paper those words, I could say whether those  
16:04:34 16 words include discussion about the application.

16:04:42 17 But I'm not a patent lawyer.

16:04:51 18 Q. Is it your opinion that capacitance is  
16:05:00 19 measured in farads?

16:05:11 20 A. It is my experience that the property of  
16:05:16 21 capacitance is usually measured in microfarads.

16:05:21 22 Farad is a very big number.

16:05:24 23 Q. And microfarad is --

16:05:34 24 How does microfarad relate to a farad?

16:05:37 25 A. One-millionth.

16:05:39 1 Q. Of a farad?

16:05:40 2 A. Of a farad.

16:05:41 3 Q. So would it be fair to say that

16:05:44 4 capacitance is measured in farads?

16:05:47 5 A. Sure.

16:05:47 6 Q. And if we would look at Page 14 of the

16:05:54 7 Court's Claim Construction Order in Exhibit 6 where

16:05:59 8 it -- the Element 4 has been construed by the Court to

16:06:03 9 require a determinable capacitance, do you -- is it

16:06:09 10 your expert opinion that a determinable capacitance

16:06:13 11 would also be measured in farads?

16:06:23 12 A. That farads or microfarads --

16:06:26 13 Q. Farads or microfarads.

16:06:28 14 A. -- would not be sufficient as to

16:06:31 15 completely describe capacitance, that there are other

16:06:41 16 peripheral properties of capacitance such as data loss

16:06:45 17 and insertion loss would have to be characterized at

16:06:50 18 the same time to understand a capacitance, especially

16:06:57 19 if you're not in straight DC applications, direct

16:07:02 20 current applications.

16:07:03 21 Q. So is it your opinion that determinable

16:07:18 22 capacitance is not measured in farads?

16:07:26 23 A. That it's my opinion that at frequencies

16:07:32 24 other than direct current, such as RF frequencies to

16:07:38 25 things like iPods and cell phones work at, you must

16:07:41 1 make other measurements than straight capacitance in  
16:07:46 2 farads as to characterize the capacitance.

16:07:52 3 Q. And if you only were interested in a  
16:07:55 4 value of capacitance, would you express that value in  
16:07:59 5 farads?

16:08:03 6 A. I would express that value in farads at  
16:08:10 7 a particular DC voltage, that a DC voltage, three  
16:08:20 8 volts, say, five volts, and I could then characterize  
16:08:24 9 it exactly in microfarads.

16:08:32 10 However, once I got into alternating  
16:08:34 11 current, AC, including RF, I would need more  
16:08:40 12 parameters specified than just, say, three volts and  
16:08:46 13 five farads, for instance.

16:08:47 14 Q. Could you -- If you were interested in  
16:08:57 15 determining a capacitance value, can you do that for a  
16:09:03 16 particular design of a capacitor based on a formula  
16:09:10 17 for capacitance?

16:09:12 18 MR. SCHATZ: Objection.

16:09:13 19 Are you referring to determining a  
16:09:15 20 capacitance as it's used in the context of the Court's  
16:09:19 21 Claim Construction, or not?

16:09:19 22 BY MR. SLONIM:

16:09:23 23 Q. You may answer if you understand the  
16:09:24 24 question.

16:09:34 25 A. Sorry. The preciseness of the question,

16:09:37 1 I've lost it with respect to that subsequent wording  
16:09:42 2 discussion there.

16:09:43 3 So can you repeat the question, please?

16:09:45 4 Q. Sure.

16:09:49 5 If one is interested in determining a  
16:09:52 6 value of capacitance for a particular capacitor

16:10:06 7 design, can one determine that value of capacitance  
16:10:10 8 based on a formula for capacitance?

16:10:23 9 A. If one were given a discrete capacitor,  
16:10:31 10 chip, monolithic block, and you asked me what is the  
16:10:38 11 capacitance of this capacitor under a particular set  
16:10:44 12 of conditions, yes, it could be determined.

16:10:49 13 Q. By a formula?

16:10:51 14 A. By making measurements, and then putting  
16:10:54 15 the measurements into the formula and doing the  
16:10:56 16 calculations, yes.

16:10:58 17 Q. If I provided you with Figure 2A in the  
16:11:05 18 356 patent, which is Exhibit 3, and told you that the  
16:11:17 19 thickness of the first -- of Element Number 12, end  
16:11:30 20 termination or a contact, and the thickness of Element  
16:11:35 21 Number 13 were 1 mil each, and the distance between  
16:11:41 22 the edges on the top side of the dielectric body was  
16:11:46 23 30 mils and the dielectric constant was -- of the  
16:11:54 24 insulating layer between them was 2,000, would you be  
16:12:00 25 able to use a formula to determine a capacitance

16:12:06 1 between the edges of 12 and 13 in Figure 2A?

16:12:12 2 A. No.

16:12:12 3 Q. What else would you need to know?

16:12:21 4 A. Figure 2A, I see as one of ordinary  
16:12:30 5 skill in the art, comprises multiple capacitors. It  
16:12:45 6 is an array of capacitors.

16:12:47 7 There are fringe effect capacitors on  
16:12:52 8 the top and bottom sides formed by the opposing ends  
16:12:56 9 of externally conductive plates 12 and 13.

16:13:03 10 In addition, there are internal  
16:13:07 11 capacitance elements formed. For instance, between  
16:13:12 12 Elements 11 and 11 prime, and 10 -- boy, this looks  
16:13:19 13 like it's 10 some -- superscript.

16:13:23 14 And likewise, it would be 14 and 14  
16:13:28 15 prime, et cetera.

16:13:30 16 So this is a -- Figure 2A is a complex  
16:13:34 17 array of five or six capacitors. It -- One of  
16:13:45 18 ordinary skill in the art would not be able to  
16:13:49 19 calculate anything close to what would be in reality  
16:13:54 20 determined through measurement.

16:14:03 21 Q. That was not my question.

16:14:05 22 A. Okay.

16:14:06 23 Q. If we limit ourselves to the edge of  
16:14:15 24 contact 12 and edge of contact 13 on top of the  
16:14:20 25 dielectric body, and we -- let's say for the moment,

16:14:26 1 we assume that there are no plates in Figure 2A that  
16:14:35 2 is just dielectric.

16:14:37 3 Would you be able to determine by a  
16:14:40 4 formula a capacitance between the edges of 12 and 13,  
16:14:47 5 the fringe effect capacitor that is formed there?

16:14:54 6 A. There are two fringe effect capacitors  
16:14:59 7 formed, on the top and bottom, of -- I see of the  
16:15:04 8 capacitor represented in 2A.

16:15:06 9 And if all of the internal plates were  
16:15:12 10 not present, I see a potential -- I'd have to  
16:15:23 11 understand what 14 and 14 on both sides of are.

16:15:28 12 It could be that that would print  
16:15:36 13 circuit board material or something -- printed circuit  
16:15:39 14 board material are Elements 14. There could be a  
16:15:41 15 fringe effect capacitance there.

16:15:43 16 Q. I would represent to you that the patent  
16:15:47 17 refers to Elements 14 as the traces of a printed  
16:15:52 18 circuit board.

16:15:53 19 A. Okay.

16:15:54 20 Q. And I would agree with you that there  
16:15:56 21 would be a third --

16:15:57 22 A. Right.

16:15:57 23 Q. -- fringe effect capacitor between 14  
16:16:00 24 and 14.

16:16:03 25 A. If in deed those are conductive traces,

16:16:06 1 then, yes, the location --

16:16:09 2 And I recall now something about this

16:16:12 3 complex where you mounted a capacitor across the gap

16:16:18 4 in traces, and you took advantage of additional fringe

16:16:24 5 effect capacitors.

16:16:24 6 So we could have three fringe effect

16:16:27 7 capacitors there if neglecting anything within the

16:16:32 8 body of the part.

16:16:35 9 Q. Let's say for the purposes of my

16:16:38 10 hypothetical --

16:16:40 11 A. Right.

16:16:40 12 Q. -- the body is entirely dielectric.

16:16:45 13 There are no conductive plates within the body. And

16:16:50 14 it is encapsulated in 12 and 13 externally as

16:16:56 15 contacts, and then its placed on traces 14.

16:17:00 16 And let's say the thickness of the

16:17:03 17 dielectric body, without any internal plates, is

16:17:09 18 30 mils, and the dielectric constant of that

16:17:12 19 dielectric is 2,000, and the contacts, the thickness

16:17:18 20 of the contacts is 1 mil, and let's say the thickness

16:17:23 21 of the -- and the distance between edges 12 and 13 is

16:17:27 22 30 mils and -- would you be able to then determine the

16:17:35 23 capacitance values for the top fringe effect capacitor

16:17:40 24 and the bottom fringe effect capacitor, and

16:17:46 25 potentially, if you were asked, for the fringe effect

16:17:47 1 capacitor between traces 14 and 14?

16:17:52 2 A. With your hypothetical description, a  
16:18:02 3 key element of which is a 30 mil separation between  
16:18:09 4 the top and bottom segments of this, I would be  
16:18:21 5 surprised if there were anything measurable.

16:18:26 6 But I would not trust the results of  
16:18:28 7 anything I got through a formula. I'd want to put  
16:18:32 8 some probes on it in practicality in my instrument lab  
16:18:37 9 at a supplier and attempt to measure whether there was  
16:18:41 10 any determinable capacitance.

16:18:47 11 Q. And my question was, which I think you  
16:18:52 12 have not answered --

16:18:54 13 A. Oops. Please.

16:18:56 14 Q. I will attempt it for --

16:18:58 15 A. We're working there.

16:19:00 16 Q. -- the enth time.

16:19:03 17 A. Enth being a small number, under ten.

16:19:08 18 Q. Do you always redefine the questions  
16:19:10 19 that way?

16:19:10 20 A. I like to understand things in concrete  
16:19:14 21 terms. I tend to be a more -- a practical person.

16:19:17 22 Q. So the patents are not practical?

16:19:20 23 A. Oh, they are. But it raises such an --  
16:19:25 24 Enth times seems to be a bit in  
16:19:27 25 determinable.

16:19:28 1 Q. Indefinite?

16:19:29 2 A. Without being further defined, yes.

16:19:32 3 Q. Very well.

16:19:39 4 I didn't ask you whether you would

16:19:41 5 measure, actually built and measure. But what I

16:19:47 6 wanted to ask you is whether you would be able to

16:19:50 7 calculate by a formula, given my assumptions, about

16:19:57 8 dielectric constant, the thickness of the dielectric

16:20:02 9 body, the thickness of the contacts 12 and 13, and the

16:20:06 10 distances between the edges on the top and the bottom,

16:20:09 11 whether you would be able to calculate by a formula

16:20:15 12 the capacitance value of the first and second fringe

16:20:22 13 effect capacitors that would be present between the

16:20:25 14 edges of the contacts on top and the bottom.

16:20:28 15 Would you be able to do that by a

16:20:30 16 formula?

16:20:33 17 A. I do not know of a formula to do so.

16:20:38 18 Did I know and trust a formula and have

16:20:43 19 all of the elements of the formula defined?

16:20:47 20 I could so calculate. And that's

16:20:51 21 irrespective of any relationship to the 356 patent or

16:20:56 22 otherwise.

16:20:59 23 Q. I see.

16:20:59 24 Did you review the statement or

16:21:03 25 declaration by Dr. Dougherty in preparation of your

16:21:06 1 declaration that was submitted to the Court?

16:21:10 2 A. I reviewed the basic statement without

16:21:16 3 all of the associated exhibits. I think they're

16:21:20 4 called -- some thick says of exhibits that went with

16:21:25 5 that.

16:21:25 6 Q. So you've reviewed Dr. Dougherty's

16:21:29 7 statement?

16:21:29 8 A. Yes.

16:21:29 9 Q. And for how long did you review that?

16:21:37 10 A. I would expect a maximum of perhaps six

16:21:37 11 hours.

16:21:44 12 Q. Just on that statement alone?

16:21:47 13 A. That's a maximum.

16:21:49 14 I've not got my notes here as to what I

16:21:53 15 spent on each day and what I spent doing it. I did

16:21:57 16 not.

16:21:57 17 Q. I see. I see.

16:21:59 18 Are your statements --

16:22:00 19 Are your notes and statements in your

16:22:03 20 possession detailed as to how much time you spent

16:22:06 21 reviewing each document?

16:22:07 22 A. No.

16:22:09 23 They're detailed as to how much time I

16:22:11 24 spent each day --

16:22:12 25 Q. And how much --

16:22:13 1 A. -- with a total.

16:22:15 2 Q. How much approximately --

16:22:18 3 How much time have you spent

16:22:19 4 approximately on studying the materials that you

16:22:27 5 needed to prepare your declaration and preparing your

16:22:31 6 declaration as it was submitted to the Court?

16:22:34 7 How much time did you spend doing that

16:22:37 8 entire process that culminated in your declaration?

16:22:41 9 A. On the order of 24 hours.

16:22:43 10 Q. Over what period of time?

16:22:48 11 A. Over a period of time of perhaps

16:22:51 12 two-and-a-half weeks.

16:22:55 13 Q. When were you retained by Presidio to

16:22:59 14 submit this declaration?

16:23:02 15 A. I do not recall. I'd have to go back

16:23:04 16 and look at the e-mail traffic so doing that.

16:23:10 17 Q. Who first contacted you from the

16:23:14 18 Presidio side about this case?

16:23:18 19 A. Alan Devoe.

16:23:19 20 Q. Have you known Alan before he contacted

16:23:25 21 you about this case?

16:23:30 22 A. In -- I have met Alan before. I've not

16:23:36 23 spent sufficient time to call him more than an

16:23:42 24 acquaintance.

16:23:42 25 Q. On how many occasions have you met Alan?

16:23:52 1 A. Perhaps two to three times over a period  
16:23:55 2 of ten years.  
16:23:57 3 Q. Very well.  
16:24:01 4 Could you please look at your  
16:24:03 5 declaration on Page 2 --  
16:24:07 6 MR. SCHATZ: I was going to say, are you going  
16:24:10 7 to be quick?  
16:24:11 8 MR. SLONIM: Absolutely. Absolutely.  
16:24:12 9 MR. SCHATZ: I just want to take a restroom  
16:24:14 10 break.  
16:24:14 11 MR. SLONIM: Absolutely.  
16:24:15 12 Q. On Page 2 of your declaration --  
16:24:17 13 A. That's Exhibit 2?  
16:24:19 14 Q. Exhibit 2, absolutely.  
16:24:20 15 A. And we're talking Page 2 at the very  
16:24:22 16 top, labeled at the top?  
16:24:23 17 Q. No, labeled 2 as "Declaration of Expert  
16:24:28 18 Witness".  
16:24:28 19 A. Got it. Page 3 of this document, but 2  
16:24:32 20 of the declaration, itself.  
16:24:34 21 Q. Correct.  
16:24:35 22 A. Okay.  
16:24:35 23 Q. And is the list of the documents on top  
16:24:40 24 of this page as the documents you've reviewed in  
16:24:45 25 preparation for this declaration accurate as it is

16:24:51 1 stated on top of that Page 2 of Exhibit 2?

16:24:59 2 A. All of those documents were received by  
16:25:05 3 me and reviewed to a varying extent of thoroughness,  
16:25:10 4 yes.

16:25:14 5 Q. Would you please read me where in this  
16:25:17 6 list there is a statement or a declaration of  
16:25:20 7 Dr. Dougherty that you've testified you've reviewed in  
16:25:24 8 preparation of this declaration?

16:25:34 9 A. I am assuming that that is somewhere  
16:25:38 10 within the three document sets mentioned in the middle  
16:25:45 11 of this list.

16:25:46 12 I did not review the documents by this  
16:25:52 13 terminology. I, for instance, reviewed it by  
16:25:55 14 Dr. Dougherty's statement. And I'm sure that  
16:25:58 15 statement is covered here.

16:25:59 16 Q. Would you please read me what are the  
16:26:01 17 middle parts of this page --

16:26:04 18 A. "Document Set PCI 0001 - PCI 00013."  
16:26:15 19 "Document Set PCI 00057 - PCI 00161."  
16:26:24 20 "Document Set PCI 00300 - PCI 00377."

16:26:33 21 Q. And have you reviewed --

16:26:35 22 In addition to the Dr. Dougherty  
16:26:37 23 statement, have you reviewed any other document that  
16:26:41 24 is not included in this list of materials that you  
16:26:46 25 have reviewed in preparation of your declaration?

16:26:50 1 A. Can you define reviewed?

16:27:06 2 Q. Have you ever used that word before?

16:27:09 3 A. Yes, I -- Yes, I have.

16:27:12 4 Q. And how have you --

16:27:14 5 How would you understand that word in

16:27:15 6 connection with reviewing a document?

16:27:18 7 What would you do if I asked you to

16:27:19 8 review a document?

16:27:21 9 What would you understand?

16:27:26 10 A. In ordinary context, I understand a

16:27:29 11 review is to be --

16:27:32 12 And again, this is another subjective

16:27:34 13 word, a fairly intensive evaluation of the contents of

16:27:39 14 a document as it applies to whatever I'm reviewing it

16:27:44 15 for.

16:27:48 16 Q. Would it include reading the document?

16:27:50 17 A. Yes, it would.

16:27:51 18 Q. In its entirety?

16:27:55 19 A. It might.

16:27:58 20 Q. And if I asked you whether --

16:28:04 21 If you can look on Page 1 of your

16:28:06 22 declaration, Exhibit 2 --

16:28:09 23 A. Okay.

16:28:09 24 Q. At the very bottom, if you could read

16:28:12 25 into the record the beginning of Paragraph 4, please.

16:28:19 1 A. The words "materials used for this  
16:28:22 2 declaration"?

16:28:23 3 Q. Yes.

16:28:24 4 A. "Materials used for this declaration.  
16:28:28 5 First, the documents supplied by legal counseling  
16:28:32 6 [sic] are following".

16:28:35 7 Would you like me to read this entire  
16:28:37 8 list?

16:28:38 9 Q. No.

16:28:38 10 A. Okay.

16:28:39 11 Q. I believe you didn't read it correctly.

16:28:44 12 You didn't indicate that the word

16:28:48 13 "first" was underlined.

16:28:49 14 A. You're right.

16:28:50 15 Q. And you didn't indicate that there was a  
16:28:52 16 colon after "following".

16:28:54 17 A. There was a comma after "first" and  
16:28:57 18 after "counsel".

16:28:58 19 Q. And it was not the word "counseling".

16:29:02 20 A. If I said "counseling", excuse me. The  
16:29:06 21 word I see it as "counsel".

16:29:08 22 Q. All right. I just wanted to make sure  
16:29:10 23 that your declaration and your reading of it is  
16:29:12 24 accurate.

16:29:13 25 A. Yes.

16:29:13 1 Q. So when you said "materials used for  
16:29:17 2 this declaration," is the list of the materials used  
16:29:23 3 for this declaration that follows in Paragraph 4 a  
16:29:28 4 complete list of documents you've used for this  
16:29:34 5 declaration?

16:29:36 6 A. Yes.

16:29:36 7 Q. Didn't you say that you've reviewed  
16:29:43 8 Dr. Dougherty's statement in preparation for this  
16:29:46 9 declaration?

16:29:47 10 A. Uh-huh.

16:29:49 11 Q. And it is not reflected on the list of  
16:29:52 12 the materials in Paragraph 4?

16:29:54 13 A. I'm not sure whether this list includes  
16:29:58 14 that or not.

16:29:59 15 Q. Should it include it?

16:30:00 16 A. Yes.

16:30:00 17 Q. Because you've used that declaration?

16:30:04 18 A. Yes.

16:30:04 19 Q. Should it include any other documents,  
16:30:09 20 to the best of your recollection?

16:30:11 21 A. To the best of my recollection, if this  
16:30:16 22 list does not include that, it should. I do not  
16:30:19 23 recall having reviewed any other documents other than  
16:30:26 24 those supplied in the list.

16:30:28 25 Q. Have you reviewed Dr. Godshalk's

16:30:32 1 deposition transcript?

16:30:33 2 A. No, I have not.

16:30:34 3 Q. Is have you been provided with a copy of  
16:30:37 4 that?

16:30:37 5 A. No, I have not.

16:30:37 6 Q. Do you know who Dr. Godshalk is?

16:30:39 7 A. No.

16:30:40 8 Q. Have you ever met him?

16:30:43 9 A. No.

16:30:43 10 Q. Have you ever spoken to him?

16:30:50 11 A. I Googled Dr. Godshalk, and came up with  
16:30:54 12 three separate ones which might relate. And none of  
16:30:59 13 them are at all familiar.

16:31:01 14 Q. How did you learn about Dr. Godshalk?

16:31:05 15 A. By reading in one of the documents in  
16:31:10 16 this set his name.

16:31:13 17 Q. And did you ask legal counsel --

16:31:17 18 Did you see references in any of the  
16:31:19 19 documents to the transcript of Dr. Godshalk's  
16:31:23 20 deposition?

16:31:25 21 A. Transcript?

16:31:26 22 I saw reference to specific words by  
16:31:30 23 Dr. Godshalk. I assumed those words came from his  
16:31:36 24 deposition, but I did -- I was not tasked to review  
16:31:42 25 his deposition.

16:31:44 1 Q. And once you saw the words from  
16:31:48 2 Dr. Godshalk in one of these documents, have you asked  
16:31:51 3 legal counsel to provide you with the source of those  
16:31:57 4 words where they were originally typed up?

16:32:02 5 A. No.

16:32:03 6 I expressed mild curiosity about who  
16:32:08 7 this was and what his expertise was, but was told this  
16:32:14 8 was not part of my -- was not part of what I was being  
16:32:21 9 requested to do.

16:32:22 10 Q. And what were you requested to do?

16:32:25 11 A. To review these -- this set of materials  
16:32:32 12 at the top of Page 2A. And if this should be amended  
16:32:37 13 to include Dr. Dougherty's testimony, great. That  
16:32:42 14 should be included in there.

16:32:43 15 And with those, all of this material  
16:32:48 16 there, to look at the list of definitions given on  
16:32:57 17 Page 16 for six terms of -- that's Page 16 of  
16:33:02 18 Exhibit 6, as defined by the Court, and to come to an  
16:33:11 19 opinion as one of ordinary skill in the art as defined  
16:33:14 20 by Dr. Dougherty, and decide whether that would be  
16:33:18 21 sufficient for me to say, yes, I sufficiently  
16:33:24 22 understand those terms, that if I saw a particular  
16:33:31 23 product, that I could say whether that particular  
16:33:36 24 product in deed satisfies the claims of the patent.

16:33:42 25 MR. SCHATZ: Can we take our break?

16:33:44 1 MR. SLONIM: Absolutely.

16:33:45 2 MR. SCHATZ: Thank you.

16:33:46 3 THE VIDEOGRAPHER: Going off the record.

16:33:47 4 The time is 16:33 hours.

16:33:52 5 (Whereupon a recess was taken)

16:48:07 6 THE VIDEOGRAPHER: Back on the record.

16:48:11 7 The time is 16:47 hours.

16:48:20 8 BY MR. SLONIM:

16:48:21 9 Q. Dr. Ewell, I direct your attention to

16:48:24 10 Page 2 of Exhibit 6, which is the Court's Claim

16:48:29 11 Construction Order.

16:48:30 12 A. Page 2.

16:48:34 13 Q. Do you see a picture labeled there as

16:48:40 14 "Parallel Plate Capacitor"?

16:48:41 15 A. I do. I see a drawing.

16:48:45 16 Q. A drawing.

16:48:50 17 And to your knowledge, as a purported

16:48:56 18 expert in this field --

16:48:57 19 A. Purported only is what I get?

16:48:59 20 I've been demoted. All right.

16:49:02 21 Q. I think you've been proposed.

16:49:04 22 A. Oh, okay.

16:49:07 23 Q. I don't think you've been approved by

16:49:11 24 the Court as Dr. Dougherty has been.

16:49:11 25 A. Okay.
